Military Review ,2017 **Predicted Humans** Simona Chiodo,2024-06-14 Predicting our future as individuals is central to the role of much emerging technology from hiring algorithms that predict our professional success or failure to biomarkers that predict how long or short our healthy or unhealthy life will be Yet much in Western culture from scripture to mythology to philosophy suggests that knowing one's future may not be in the subject's best interests and might even lead to disaster If predicting our future as individuals can be harmful as well as beneficial why are we so willing to engage in so much prediction from cradle to grave This book offers a philosophical answer reflecting on seminal texts in Western culture to argue that predicting our future renders much of our existence the automated effect of various causes which in turn helps to alleviate the existential burden of autonomously making sense of our lives in a more competitive demanding accelerated society An exploration of our tendency in a technological era to engineer and so rid ourselves of that which has hitherto been our primary reason for being making life plans for a successful future while faced with epistemological and ethical uncertainties Predicted Humans will appeal to scholars of philosophy and social theory with interests in questions of moral responsibility and meaning in an increasingly technological world

Brain Oscillations and Predictive Coding: What We Know and What We Should Learn Roumen Kirov,2017-04-28 Predictive coding PC is a neurocognitive concept according to which the brain does not process the whole qualia of external information but only residual mismatches occurring between incoming information and an individual inner model of the world At the time of issue initiation I expected an essential focus on mismatch signals in the brain especially those captured by neurophysiologic oscillations This was because one most plausible approach to the PC concept is to identify and validate mismatch signals in the brain Announcing the topic revealed a much deeper consideration of intelligible minds of researchers It turned out that what was of fundamental interest was which brain mechanisms support the formation maintenance and consolidation of the inner model determining PC Is PC a dynamic construct continuously modulated by external environmental or internal mental information The reader will be delighted to get acquainted with the current views and understanding of eminent scholars in the field It will be challenging to discover the realm of sleep where both physiological energy preserving and mental qualia principles build on the inner models to shape and transform the self And where neurophysiologic oscillations may both transmit external information and translate inner models from state to state to preserve the self continuity and compactness
