This book covers current refinery processes and process types that are likely to come on stream during the next three to five decades. The book includes 1 comparisons of conventional feedstocks with heavy oil, tar sand, bitumen and bio feedstocks; 2 properties and refinability of the various feedstocks; 3 thermal processes versus hydroprocesses; and 4 the influence of refining on the environment. **Refinery**

**Products and Product Improvement Processes** James G. Speight, 2024-04-18 This book focuses on the various refinery products, product improvement processes and solvent processes that are used in the refining industry and the processes used in product improvement to ensure products meet sales specifications. This accessible book is written for engineers, scientists, students and academics wanting an update on crude oil processing and insight into the direction of the industry. Key features: Describes the development of technologies for a variety of feedstocks including heavy feedstocks utilizing advanced pre-treatment processing and hydrotreating; Presents the initial refining processes and prepares for the new changes and evolution of the industry including the role of biomass in the future refinery; Analyses catalyst deactivation mechanism for developing optimum technologies for processing feedstocks with low reactivity; Includes an extensive glossary which will be beneficial for non-technical readers. **Fossil Energy** Ripudaman Malhotra, 2012-12-12 The word sustainability shares its root with sustenance. In the context of modern society, sustenance is inextricably linked to the use of energy. **Fouling in Refineries** James G. Speight, 2015-05-14 Fouling in Refineries is an important and ongoing problem that directly affects energy efficiency, resulting in increased costs, production losses and even unit shutdown requiring costly expenditures to clean up equipment and return capacity to positive levels. This text addresses this common challenge for the hydrocarbon processing community within each unit of the refinery. As refineries today face a greater challenge of accepting harder to process heavier crudes and the ongoing flow of the lighter shale oil feedstocks resulting in bigger challenges to balance product stability within their

process equipment this text seeks to inform all relative refinery personnel on how to monitor fouling characterize the deposits and follow all available treatments With basic modeling and chemistry of fouling and each unit covered users will learn how to operate at maximum production rates and elongate the efficiency of their refinery s capacity Presents an understanding of the breakdown of fouling per refinery unit including distillation and coking units Provides all the factors crude types and refining blends that cause fouling especially the unconventional feedstocks and high acid crudes used today Helps users develop an analysis based treatment and control strategy that empowers them to operate refinery equipment at a level that prevents fouling from occurring     **Guide to the Use of Materials in Waters** Michael Davies,Dr. Michael Davies,P.
