Critical Success Factors of Mobile

Payment Christian Hort,2003-04-08 Inhaltsangabe Abstract Mobile payment mPayment can be understood as every payment where at least one participant applies mobile phone technology thus uses a mobile phone But due to technological progress it

seems reasonable to classify other devices like a Personal Digital Assistant PDA or devices with embedded Radio Frequency RF technology as mobile payment devices However mobile phones today clearly outnumber every other mobile payment

device Penetration rates are forecasted to reach almost 80% in Europe by 2005 The number of worldwide cellular

subscribers is expected to pass one billion by 2003 By 2005 there will be more mobile phones worldwide than TVs fixed line phones and Personal Computers PC Driven by the increasing penetration and resulting business opportunities numerous

mPayment solutions have been offered by payment service providers telcos and financial institutions The variety of applicable technologies the possible linkage between the financial instruments and the mPayment device combined with different payment scenarios offer a wide landscape of mPayment solutions Besides technology questions dealing with consumer

expectations factors thriving or inhibiting a widespread adoption and with it related penetration strategies for payment service providers have to be carefully researched to develop a successful mPayment Based on diverse motivations and influenced by recent technology development banks telcos and start up companies endeavour to build a successful mPayment

that meets the expectations of consumers and merchants The research question of this paper focuses on factors that can be

identified as crucial to drive the success of mobile payment systems. Therefore the first goal is to give an introduction to the mPayment landscape as a foundation for further research. The second goal is to derive key factors influencing the success of an mPayment from theoretical models and by reviewing related literature. The research concentrates on business to consumer B2C and consumer to consumer C2C payment on the European and United States US market. Neither cross border payments nor business to business B2B payments are described in this paper.
