Membrane Computing Traces Neural Inspired Models Controls Getting Computational Inspiration From Biology: Dissertation Abstracts International ,1987 Development of a Bio-inspired Computational Astrocyte Model for Spiking Neural Networks Jacob Kiggins,2022 The mammalian brain is the most capable and complex computing entity known today For many years there has been research focused on reproducing the brain s processing capabilities An early example of this endeavor was the perceptron which has become the core building block of neural network models in the deep learning era Deep learning has had tremendous success in well defined tasks like object detection games like go and chess and automatic speech recognition In fact some deep learning models can match and even outperform humans in specific situations However in general they require much more training have higher power consumption are more susceptible to noise and adversarial perturbations and have very different behavior than their biological counterparts In contrast spiking neural network models take a step closer to biology and in some cases behave identically to measurements of real neurons Though there has been advancement spiking neural networks are far from reaching their full potential in part because the full picture of their biological underpinnings is unclear This work attempts to reduce that gap further by exploring a bio inspired configuration of spiking neurons coupled with a computational astrocyte model Astrocytes initially thought to be passive support cells in the brain are now known to actively participate in neural processing They are believed to be critical for some processes such as neural synchronization self repair and learning The developed astrocyte model is geared towards synaptic plasticity and is shown to improve upon existing local learning rules as well as create a generalized approach to local spike timing dependent plasticity Beyond generalizing existing learning approaches the astrocyte is able to leverage temporal and spatial integration to improve convergence and tolerance to noise The astrocyte model is expanded to influence multiple synapses and configured for a specific learning task A single astrocyte paired with a single leaky integrate and fire neuron is shown to converge on a solution in 2 3 and 4 synapse configurations Beyond the more concrete improvements in plasticity this work provides a foundation for exploring supervisory astrocyte like elements in spiking neural networks and a framework to implement and extend many three factor learning rules Overall this work brings the field a bit closer to leveraging some of the distinct advantages of biological neural networks Abstract

This is likewise one of the factors by obtaining the soft documents of this **Membrane Computing Traces Neural Inspired Models Controls Getting Computational Inspiration From Biology** by online. You might not require more era to spend to go to the ebook introduction as skillfully as search for them. In some cases, you likewise complete not discover the broadcast Membrane Computing Traces Neural Inspired Models Controls Getting Computational Inspiration From Biology that you are looking for. It will no question squander the time.

However below, past you visit this web page, it will be correspondingly unconditionally simple to acquire as without difficulty as download lead Membrane Computing Traces Neural Inspired Models Controls Getting Computational Inspiration From Biology

It will not allow many time as we tell before. You can get it even if be in something else at home and even in your workplace. suitably easy! So, are you question? Just exercise just what we come up with the money for below as capably as evaluation **Membrane Computing Traces Neural Inspired Models Controls Getting Computational Inspiration From Biology** what you in imitation of to read!
