Activated Carbon for Water and Wastewater Treatment

Treatment Ferhan Cecen,Özgür Aktas,2011-09-19 This monograph provides comprehensive coverage of technologies which integrate adsorption and biological processes in water and wastewater treatment The authors provide both an introduction to the topic as well as a detailed discussion of theoretical and practical considerations After a review of the basics involved in the chemistry biology and technology of integrated adsorption and biological removal they discuss the setup of pilot and full scale treatment facilities covering powdered as well as granular activated carbon They elucidate the factors that influence the successful operation of integrated systems Their discussion on integrated systems expands from the effects of environmental to the removal of various pollutants to regeneration of activated carbon and to the analysis of such systems in mathematical terms The authors conclude with a look at future needs for research and development A truly valuable resource for environmental engineers environmental and water chemists as well as professionals working in water and wastewater treatment

Membrane Technologies for Water Treatment Alberto Figoli,Jan Hoinkis,Jochen Bundschuh,2016-02-18

Focuses on the application of membrane technologies in removing toxic metals metalloids from water Particular attention is devoted to the removal of arsenic uranium and fluoride These compounds are all existing in the earth's crust at levels between two and five thousands micrograms per kg parts per million on average and these compounds can be considered highly toxic to humans who are exposed to them primarily from air food and water In order to comply with the new maximum contaminant level numerous studies have been undertaken to improve established treatments or to develop novel treatment technologies for removing toxic metals from contaminated surface and groundwater Among the technologies available applicable for water treatment membrane technology has been identified as a promising technology to remove such toxic metals from water The book describes both pressure driven traditional processes such as Nanofiltration Reverse Osmosis Ultrafiltration etc and more advanced membrane processes such as forward osmosis membrane distillation and membrane bio reactors employed in the application of interest Key aspect of this book is to provide information on both the basics of membrane technologies and on the results depending on the type of technology employed
