Medicine Meets Virtual Reality 19 Li Felländer-Tsai, Randy S. Haluck, Richard A. Robb, Steven Senger, Kirby G.

Vosburgh, 2012-02-15 A physician who is treating a patient confronts a complex and incompletely understood living system that is sensitive to pain. An engineer or programmer who develops a new device on the other hand operates within the less emotional domains of materials and mathematics. The Medicine Meets Virtual Reality MMVR conference brings together physicians, scientists, engineers, educators, students, and others to bridge the gap between clinicians and technologists and to create collaborative solutions to healthcare challenges. This book presents the proceedings of the Medicine Meets Virtual Reality conference MMVR19 held in Newport Beach, California, USA, in February 2012. It includes papers on modeling and simulation, imaging, data visualization, and fusion, haptics, robotics, telemedicine, and medical intelligence, networking, virtual and augmented reality, psychotherapy, and physical rehabilitation tools, serious games, and other topics. MMVR stimulates interaction between developers and end users and promotes unorthodox problem solving as a complement to rigorous scientific methodology. This book will interest all who are involved with the future of medicine. **Medicine Meets Virtual**

Reality 13 James D. Westwood, 2005. Magic describes conditions that are outside our understanding of cause and effect. Even in modern societies, magic-based explanations are powerful because given the complexity of the universe, there are so many opportunities to use them. The history of medicine is defined by progress in understanding the human body from magical explanations to measurable results. To continue medical progress, physicians and scientists must openly question traditional models. For thirteen years, MMVR has been an incubator for technologies that create new medical understanding via the simulation, visualization, and extension of reality. Researchers create imaginary patients because they offer a more reliable and controllable experience to the novice surgeon. With imaging tools, reality is purposefully distorted to reveal to the clinician what the eye alone cannot see. Robotics and intelligence networks allow the healer's sight, hearing, touch, and judgment to be extended across distance as if by magic. The moments when scientific truth is suddenly revealed after lengthy observation, experimentation, and measurement is the real magic. These moments are not miraculous, however. **book**

Medicine Meets Virtual Reality James D. Westwood, Helene M. Hoffman, Richard A. Robb, D. Stredney, 2006-12-15. MMVR offers solutions for problems in clinical care through the phenomenally expanding potential of computer technology. Computer-based tools promise to improve healthcare while reducing cost, a vital requirement in today's economic environment. This seventh annual MMVR focuses on the healthcare needs of women. Women everywhere demand more attention to breast cancer, cervical cancer, ageing-related conditions. Electronic tools provide the means to revolutionise diagnosis, treatment, and education. The book demonstrates what new tools can improve the care of their female patients. As minimally invasive procedures are mainstreamed, advanced imaging and robotics tools become indispensable. The internet and other networks establish new venues for communication and research. Medical education as well as clinical care is

enhanced by systems allowing instruction and professional interaction in ways never before possible and with efficiency never before achieved Telemedicine networks now permit providers to meet patients needs where previously impossible MMVR strengthens the link between healthcare providers and their patients The volume contains selected papers authored by presenters at the conference Areas of focus include Computer Assisted Surgery Data Fusion Informatics Diagnostic Tools Education Training Mental Health Modelling Net Architecture Robotics Simulation Telemedicine Telepresence and Visualisation
