The New Fire Ben Buchanan,Andrew Imbrie,2024-03-05 AI is revolutionizing the world Here s how democracies can come out on top Artificial intelligence is revolutionizing the modern world It is ubiquitous in our homes and offices in the present and most certainly in the future Today we encounter AI as our distant ancestors once encountered fire If we manage AI well it will become a force for good lighting the way to many transformative inventions If we deploy it thoughtlessly it will advance beyond our control If we wield it for destruction it will fan the flames of a new kind of war one that holds democracy in the balance As AI policy experts Ben Buchanan and Andrew Imbrie show in *The New Fire* few choices are more urgent or more fascinating than how we harness this technology and for what purpose The new fire has three sparks data algorithms and computing power These components fuel viral disinformation campaigns new hacking tools and military weapons that once seemed like science fiction To autocrats AI offers the prospect of centralized control at home and asymmetric advantages in combat It is easy to assume that democracies bound by ethical constraints and disjointed in their approach will be unable to keep up But such a dystopia is hardly preordained Combining an incisive understanding of technology with shrewd geopolitical analysis Buchanan and Imbrie show how AI can work for democracy With the right approach technology need not favor tyranny

Action is a thorough hands on presentation of OpenCL with an eye toward showing developers how to build high performance applications of their own. It begins by presenting the core concepts behind OpenCL including vector computing, parallel programming and multi threaded operations, and then guides you step by step from simple data structures to complex functions. About the Technology: Whatever system you have, it probably has more raw processing power than you're using. OpenCL is a high performance programming language that maximizes computational power by executing on CPUs, graphics processors and other number crunching devices. It's perfect for speed sensitive tasks like vector computing, matrix operations and graphics acceleration. About this Book: OpenCL in Action blends the theory of parallel computing with the practical reality of building high performance applications using OpenCL. It first guides you through the fundamental data structures in an intuitive manner. Then it explains techniques for high speed sorting, image processing, matrix operations and fast Fourier transform. The book concludes with a deep look at the all important subject of graphics acceleration. Numerous challenging examples give you different ways to experiment with working code. A background in C or C++ is helpful but no prior exposure to OpenCL is needed. Purchase of the print book comes with an offer of a free PDF, ePub and Kindle eBook from Manning. Also available is all code from the book.
