Data and Democracy at Work Brishen Rogers,2023-03-21 An exploration of how major companies have used advanced information technologies to limit worker power and how labor law reform could reverse that trend As our economy has shifted away from industrial production and service industries have become dominant many of the nation s largest employers are now in fields like retail food service logistics and hospitality These companies have turned to data driven surveillance technologies that operate over a vast distance enabling cheaper oversight of massive numbers of workers Data and Democracy at Work argues that companies often use new data driven technologies as a power resource or even a tool of class domination and that our labor laws allow them to do so Employers have established broad rights to use technology to gather data on workers and their performance to exclude others from accessing that data and to use that data to refine their managerial strategies Through these means companies have suppressed workers ability to organize and unionize thereby driving down wages and eroding working conditions Labor law today encourages employer dominance in many ways but labor law can also be reformed to become a tool for increased equity The COVID 19 pandemic and subsequent Great Resignation have indicated an increased political mobilization of the so called essential workers of the pandemic many of them service industry workers This book describes the necessary legal reforms to increase workers associational power and democratize workplace data establishing more balanced relationships between workers and employers and ensuring a brighter and more equitable future for us all
