Teaching Lab Science Courses Online Linda Jeschofnig, Peter Jeschofnig, 2011-02-02 Teaching Lab Science Courses Online is a practical resource for educators developing and teaching fully online lab science courses. First it provides guidance for using learning management systems and other web 2.0 technologies such as video presentations, discussion boards, Google apps, Skype, video, web conferencing, and social media networking. Moreover, it offers advice for giving students the hands on wet laboratory experience they need to learn science effectively including the implications of implementing various lab experiences such as computer simulations, kitchen labs, and commercially assembled at home lab kits. Finally, the book reveals how to get administrative and faculty buy in for teaching science online and shows how to negotiate internal politics and assess the budget implications of online science instruction. *The funding of science and discovery centres* Great Britain: Parliament: House of Commons: Science and Technology Committee, 2007-10-22 Examines the role and effectiveness of science centres how science centres are co-ordinated and organised and how they are funded. This report also welcomes the offer by the Department for Innovation Universities and Skills to take responsibility for science centres.

Inclusive and Accessible Secondary Science Jane Essex, 2023-07-20 Drawing on extensive professional experience and detailed empirical evidence this resource sets out an insightful, highly practical approach to teaching science to secondary aged students with learning difficulties and other special educational or additional support needs (SEN/ASD). The book explores the barriers that the secondary school science curriculum currently presents to those who do not learn in the expected way before providing a wealth of practical strategies to help teachers in both specialist and mainstream settings to make science more accessible. Multiple science topics are covered in depth including living and non-living matter, the periodic table, electrical energy, the solar system, the environment, and more. Each topic is supported by extensive teachers' notes outlining activities that will allow educational practitioners to enact the principles of accessibility in the classroom. With rich field notes and practical takeaways included to accompany key insights, this accessible book will provide science teachers at the secondary school level as well as support staff and anyone aspiring to teach science to SEN/ASD learners with the guidance and resources they need to make science education meaningfully inclusive. **Resources in Education**, 1998
