Florida Law Review ,2014-05 **Florida State University Law Review** Florida State University. College of Law,2012

Political Standards Karthik Ramanna,2015-11-09 Assembling compelling and unprecedented evidence Political Standards Accounting for Legitimacy documents how in subtle ways the rules of corporate accounting a critical institution in modern market capitalism have been captured to benefit industrial corporations financial firms and audit firms In what is perhaps the only independent overview of the accounting industry Karthik Ramanna begins with a history of corporate accounting and an accessible explanation of how it works today including the essential roles it plays in defining the fundamental notion of profitability facilitating asset allocation and ensuring the accountability of corporations and their managers From the evidence Ramanna shows how accounting rule makers selectively co opt conceptual arguments from academia and elsewhere to advance the views of the special interest groups From this Ramanna moves on to develop more broadly a new type of regulatory challenge that of producing public policy in a thin political market His argument is that accounting rules cannot be determined without the substantial expertise and experience of groups that by definition also have strong commercial interests in the outcome Political Standards concludes with an exploration of possible solutions to the problem in accounting and that of thin political markets in general charting avenues for scholarship and practice Certain to be an eye opening account of a massive industry central to the modern business world Political Standards will be an essential resource in understanding how the rules of the game business are set whom they inevitably favor and how they can be changed for the better of society **Urban Growth and the Circular Economy** S. Syngellakis,J. Melgarejo,2018-08-29 Presented at the 1st International Conference on Urban Growth and the Circular Economy that was held in Alicante Spain the papers included in this book focus on the continuing and rapid growth of cities and their regions of influence and how that has led to the need to find new solutions which allow for promoting their sustainable development The quest for the Sustainable City has until recently focused on the efficient use of resources with the application of technical advances giving rise to the definition of SMART Cities The economic model emphasised however is still linear in the sense that the design and consumption follows the pattern of extraction of natural resources manufacturing product usage and waste disposal The continuous growth of urban population has recently given rise to the emergence of a new model which responds better to the challenges of natural resource depletion as well as waste management This model has been called the circular economy The circular economy is a recent concept based on the reuse of what up to now has been considered wastes reintroducing them into the productive cycle The objective of the circular economy is to reduce consumption and achieve savings in terms of raw materials water and energy thus contributing to the preservation of resources in order to reach sustainable development One of the most important of these resources is water which is becoming a scarce commodity in an ever expanding world whose population demands a better standard of living Water is required for agricultural purposes as well as by industry in addition

to its use by the general population The recycling of water is an essential component of the circular economy There is no possibility for the success of a long term economic policy without addressing the problems of natural resources and environmental pollution which will affect the reuse of materials and products The current market economy based on a linear model from resource extraction manufacturing consumption and waste disposal has not proved a long term suitable solution in spite of the substantial efforts made in reducing its environmental impacts This is largely due to the continuous population growth in a society that demands high standards of living thus requiring an ever increasing share of natural resources
