*Molecular Logic and Computational Synthetic Biology* Madalena Chaves, Manuel A. Martins, 2019-04-27 This book collects the revised selected proceedings of the First International Symposium in Molecular Logic and Computational Synthetic Biology MLCSB held in Chile Santiago in December 2018. The volume contains 7 full revised papers along with 2 surveys from 19 submissions presented at the symposium. **Advanced biomaterials for osteochondral regeneration** Le Yu, Qian Feng, Chen Yang, Mei Wei, 2023-01-20 **ImmunoPhysics and ImmunoEngineering** Jorge Bernardino De La Serna, Mario Mellado, Maria Garcia-Parajo, Michael Loran Dustin, Dimitrios

Morikis, 2020-03-30 ImmunoPhysics ImmPhys and ImmunoEngineering ImmPhysEng are two cross disciplinary fields. ImmPhysEng aims to unravel quantitatively the immune system function and regulation in health and disease. Whereas ImmPhys study and assess the physical basis of the immune response ImmEng pursues its control and prediction. Ultimately the overarching goal of these disciplines is to facilitate the development of therapeutic interventions to more precisely modulate and control the compromised immune response during diseases. Lately these disciplines are becoming more popular and as such the number of publications applying physical or engineering tools to understand the immune response is increasing. Nevertheless there is still no scientific forum compiling the ImmPhysEng research breakthroughs. Possibly the biggest burden is to stimulate a fluent communication and syntony between a physicist or engineer and an immunologist.

Kretzschmar, 2022-09-29 **Oxidative Metabolism in Inflammation** Pedro Gonzalez-Menendez, Rosa M. Sainz, Pablo Andres Evelson, 2024-10-30 Mitochondrial activity is involved in different functions such as cell proliferation metabolism Adenosine triphosphate ATP generation and cell death Particularly mitochondria play a major role in inflammatory signaling They regulate the activation, differentiation and survival of macrophages while changes in oxidative metabolism alter polarization Mitochondria are the main source of free radicals and macrophages increase their oxidative stress levels when they are active The enhancement of free radicals generation in the mitochondria can damage healthy cells leading to inflammation Thus several diseases associated with an increase in mitochondrial oxidative stress can be associated with chronic inflammation The intricate crosstalk of mitochondrial metabolism and the innate immune response is well known However the therapeutic implication of metabolic reprogramming modifying the metabolic niche or targeting mitochondria in macrophages in specific inflammatory diseases is still unclear Thus the goal of this topic is to understand whether alterations of oxidative metabolism the release of mitochondrial reactive oxygen species mitochondrial membrane potential as well as changes in mitochondrial metabolites regulate innate immunity On one side we aim to better understand the mitochondria dependent regulation of the biology of macrophages On the other hand we focus on the study of oxidative metabolism in the inflammatory response associated with chronic diseases but also under the presence of invading germs The most recent advances in the topic will help to find new clinical interventions to treat acute and chronic inflammation
