Susan Greenhalgh,2024-08-21 Takes readers deep inside the secret world of corporate science where powerful companies and allied academic scientists mold research to meet industry needs The 1990s were tough times for the soda industry In the United States obesity rates were exploding Public health critics pointed to sugary soda as a main culprit and advocated for soda taxes that might decrease the consumption of sweetened beverages and threaten the revenues of the giant soda companies Soda Science tells the story of how industry leader Coca Cola mobilized allies in academia to create a soda defense science that would protect profits by advocating exercise not dietary restraint as the priority solution to obesity a view few experts accept Anthropologist and science studies specialist Susan Greenhalgh discovers a hidden world of science making with distinctive organizations social networks knowledge making practices and ethical claims dedicated to creating industry friendly science and keeping it under wraps By tracing the birth maturation death and afterlife of the science they made Greenhalgh shows how corporate science has managed to gain such a hold over our lives Spanning twenty years her investigation takes her from the US where the science was made to China a key market for sugary soda In the US soda science was a critical force in the making of today's society of step counting fitness tracking weight obsessed citizens In China this distorted science has left its mark not just on national obesity policies but on the apparatus for managing chronic disease generally By following the scientists and their ambitious schemes to make the world safe for Coke Greenhalgh offers an account that is more global and yet more human than the story that dominates public understanding today Coke's

research isn't fake science Greenhalgh argues it was real science conducted by real and eminent scientists but distorted by its aim Her gripping book raises crucial questions about conflicts of interest in scientific research the funding behind familiar messages about health and the cunning ways giant corporations come to shape our diets lifestyles and health to their own needs Science Activities for Elementary Students George C. Lorbeer,2000 Science Activities for Elementary Students Eleventh Edition a revision of George Lorbeer and Leslie Nelson's classic Science Activities for Children gives instructors practical fun hands on learning activities to help teach children about science and problem solving skills Each activity follows the same step by step format Problem Procedure Result Supplemental Information and Thought Questions The activities are accompanied by simple illustrations that help clarify procedures and expected results With a total of nearly 600 activities in both spiral bound books future science teachers will find a wealth of ideas to help them become more effective in the classroom Science Activities for Elementary School Children features basic introductory activities while Science Activities for Middle School Children contains more rigorous more challenging higher level science activities The elementary text discusses basic ecology while the middle school book has activities about the Greenhouse Effect the Icehouse Effect Ozone Depletion and the Eutrophication of some of our fresh water supplies Both texts are an excellent and comprehensive resource that future and practicing teachers of elementary science will want to keep at arm's length for ready reference

**Current Index to Journals in Education** ,1999 **Active Education** Julian A. Reed,2009 The belief that physical activity plays a pivotal role in the public health of our nation's children is no longer a minority opinion but rather a steadfast belief The health benefits associated with leading an active healthy lifestyle are well documented yet America's youth remain inactive and overweight if not obese Data suggests that about 25 million adolescents are pushing the scales towards obesity Close to half of American youth do not participate regularly in physical activity and many kids report no participation in activity during an average week There is an abundance of empirical research findings illustrating how regular physical activity provides an array of physiological health benefits but what is frequently overlooked is the link between movement and the enhanced cognition of children Brain research suggests that increasing movement time has the potential to foster academic performance simultaneously positively influencing the health of our nation's children Empirical evidence from

leading scientists reveal strong associations between the cerebellum and memory spatial perception language attention emotion non verbal cues and the decision making ability among children who are active while learning content in the classroom Regular physical activity combined with teaching traditional elementary school curricula has also been found to improve concentration along with reading and mathematic performance and academic achievement measured by standardised tests Furthermore positive benefits linked to using movement as a reinforcer to enhance learning by decreasing behavioural episodes of children suffering from ADD and ADHD has also been found The current emphasis on performance pedagogy and standardised testing related to No Child Left Behind has caused many States and school districts to reduce physical education offerings and in some instances reduce the amount of daily recess time to increase classroom contact hours to boost test scores What most teachers and principals often ignore is that teaching current elementary school curricula i e Language Arts Math Science and Social Studies with movement can improve academic performance and achievement while improving the wellness of future generations of children Active Education Lessons for Integrating Physical Activity with Language Arts Math Science and Social Studies provides teachers with standard based activities to teach required elementary school curricula with movement to make teaching and learning more enjoyable
