

## Rotary blowers for nitrogen conveying Model: Omega P/N

### Field of application

Some bulk materials have to be transported within a closed system under a nitrogen atmosphere.

Components from all system components – including rotary blowers – should therefore be kept to an absolute minimum. For such applications, specially developed P/N series blowers are available with three different types of shaft seal: labyrinth seals, as well as wave and side ring seals.

## Vacuum blowers with pre-inlet cooling Model: Omega PV

### Field of application

For use in the vacuum range up to 100 mbar (or 100 mbar vacuum).

### Function

In vacuum (positive) blowers (omega), the inlet and the cooling ambient air (blue) enter the blower block via so-called pre-cool channels in the outer housing system. The two separate flows subsequently converge and the strong compression load is dispersed throughout a much larger volume of compressed air. This approach therefore achieves the same discharge temperatures that are produced by normal blowers (omega).

### Application examples

Stationary application: Continuous material processing (left photo)

Portable application: Surface prep (right photo)
