Palliative Medicine A Case Based Manual:

Palliative Medicine: A Case-Based Manual Susan MacDonald, Leonie Herx, Anne Boyle, 2021-12-08 Palliative medicine is the medical care provided for people who have a life limiting illness or condition. It encompasses both the physical symptoms a person may experience but also the psychosocial, emotional and ethical issues that may arise. Now in its fourth edition, *Palliative Medicine A Case Based Manual* walks clinicians through the management of the most common situations found in palliative medicine from diagnosis and managing symptoms through to grief and bereavement. Using real patient case scenarios and an easy to read question and answer format, it gives students and medical professionals an accessible evidence based entryway to gain the skills and knowledge needed to provide high quality palliative and end of life care to patients and their families. This new edition has been fully updated to cover the latest guidance including new chapters dedicated to medical cannabis, opioids, grief and bereavement and wider issues including palliative care in the community, structurally vulnerable populations and public health. Written by over 50 experienced palliative care clinicians and educators, this book will be a welcome guide for palliative care workers, medical and nursing students and medical professionals of any specialty where palliative needs might arise.

Palliative Medicine Neil MacDonald, 2005 Palliative care is now an integral part of the undergraduate medical curriculum. Medical education across the board is adopting a case based approach. This book uses a series of cases to illustrate critical points in palliative medicine. The case studies have been carefully chosen to reflect real life clinical practice. The contributors illustrate through the case studies the desired skills, attitudes and knowledge required in this field of medicine. The second edition of this popular book continues to offer a panoramic view of palliative care. The new edition introduces a number of new topics, new authors and a thorough update on continuing chapters. It includes material on non malignant disease which is an integral part of palliative care. The text distinguishes between evidence based practice and common practice which has yet to be verified by research studies. Each chapter includes a brief section at the end containing a commentary on future trends and promising areas of research.

Palliative Medicine Neil MacDonald, Marcel Boisvert, Deborah Dudgeon, Neil Hagen, 1998 In line with much of today's medical teaching, the authors of this unique book have used a series of cases to illustrate critical points in palliative medicine. The case outlines are linked to learning objectives throughout the case discussions are used to illustrate the desired attitudes, skills and knowledge base outlined at the beginning of each chapter. In all thirty symptom problems and psychosocial issues are discussed including a number of symptoms not commonly considered in other textbooks such as sleep disorders. The comprehensive section devoted to psychosocial factors in palliative medicine contains an excellent chapter on ethics as well as chapters on cost containment and cultural issues in addition to the more commonly encountered psychosocial problems.
