Mattson, 2023-11-07 The essential guide for writing portable parallel programs for GPUs using the OpenMP programming model Today's computers are complex multi-architecture systems multiple cores in a shared address space graphics processing units GPUs and specialized accelerators To get the most from these systems programs must use all these different processors In **Programming Your GPU with OpenMP** Tom Deakin and Timothy Mattson help everyone from beginners to advanced programmers learn how to use OpenMP to program a GPU using just a few directives and runtime functions Then programmers can go further to maximize performance by using CPUs and GPUs in parallel true heterogeneous programming And since OpenMP is a portable API the programs will run on almost any system **Programming Your GPU with OpenMP** shares best practices for writing performance-portable programs Key features include The most up-to-date APIs for programming GPUs with OpenMP with concepts that transfer to other approaches for GPU programming Written in a tutorial style that embraces active learning so that readers can make immediate use of what they learn via provided source code Builds the OpenMP GPU Common Core to get programmers to serious production-level GPU programming as fast as possible Additional features A reference guide at the end of the book covering all relevant parts of OpenMP 5.2 An online repository containing source code for the example programs from the book provided in all languages currently supported by OpenMP C, C++ and Fortran Tutorial videos and lecture slides

**Deep Learning Applications with Practical Measured Results in Electronics Industries** Mong-Fong Horng, Hsu-Yang Kung, Chi-Hua Chen, Feng-Jang Hwang, 2020-05-22 This book collects 14 articles from the Special Issue entitled **Deep Learning Applications with Practical Measured Results in Electronics Industries** of *Electronics* Topics covered in this Issue include four main parts 1 environmental information analyses and predictions 2 unmanned aerial vehicle (UAV) and object tracking applications 3 measurement and denoising techniques and 4 recommendation systems and education systems These authors used and improved deep learning techniques e.g. ResNet deep residual network Faster RCNN faster regions with convolutional neural network LSTM long short-term memory ConvLSTM convolutional LSTM GAN generative adversarial network etc to analyze and denoise measured data in a variety of applications and services e.g. wind speed prediction air quality prediction underground mine applications neural audio caption etc Several practical experiments were conducted and the results indicate that the performance of the presented deep learning methods is improved compared with the performance of conventional machine learning methods

**Using OpenMP-The Next Step** Ruud Van Der Pas, Eric Stotzer, Christian Terboven, 2017-10-20 A guide to the most recent advanced features of the widely used OpenMP parallel programming model with coverage of major features in OpenMP 4.5 This book offers an up-to-date practical tutorial on advanced features in the widely used OpenMP parallel programming model Building on the previous volume **Using OpenMP: Portable Shared Memory Parallel Programming** MIT Press this book goes beyond the fundamentals to focus on what has been

changed and added to OpenMP since the 2.5 specifications. It emphasizes four major and advanced areas: thread affinity, keeping threads close to their data, accelerators, special hardware to speed up certain operations, tasking to parallelize algorithms with a less regular execution flow, and SIMD hardware-assisted operations on vectors. As in the earlier volume, the focus is on practical usage with major new features primarily introduced by example. Examples are restricted to C and C++ but are straightforward enough to be understood by Fortran programmers. After a brief recap of OpenMP 2.5, the book reviews enhancements introduced since 2.5. It then discusses in detail tasking, a major functionality enhancement. Non-Uniform Memory Access (NUMA) architectures supported by OpenMP, SIMD or Single Instruction Multiple Data (SIMD) heterogeneous systems, a new parallel programming model to offload computation to accelerators, and the expected further development of OpenMP.

**The world according to zebrafish: How neural circuits generate behaviour** Gonzalo G. De Polavieja, German Sumbre, 2014-11-07. Understanding how the brain functions is one of the most ambitious current scientific goals. This challenge will only be accomplished by a multidisciplinary approach involving genetics, molecular biology, optics, ethology, neurobiology, and mathematics, and using tractable model systems. The zebrafish larva is a transparent, genetically tractable, small vertebrate, ideal for the combination of state-of-the-art imaging techniques, e.g., two-photon scanning microscopy, single-plane illumination microscopy, spatial light modulator microscopy, and lightfield microscopy, bioluminescence, and optogenetics, to monitor and manipulate neuronal activity from single specific neurons up to the entire brain in an intact behaving organism. Furthermore, the zebrafish model offers a large and increasing collection of mutant and transgenic lines, modelling human brain diseases. With these advantages in hand, the zebrafish larva became in the recent years a novel animal model to study neuronal circuits and behaviour, taking us closer than ever before to understanding how the brain controls behaviour.
