Accurate and Complete View of Customer Information

Oracle Advanced Collections increases collections efficiency by bridging the gap between back-office transactional data and front-office customer management processes. Easy navigation and a filtering tool that organizes large amounts of transactional data provide agents with the information they need to manage each customer. Historical information on interactions, correspondence, payments, promises, disputes and adjustments along with collection notes, aging data and customer metrics is available.

Figure 1: View collections data at the operating unit, customer, account, bill-to-site or transaction level.

Payments, disputes, adjustments, and promises to pay are easily captured and automatically tracked; broken promises are automatically assigned for timely follow-up. Using single collections agent assignment or complex collections territory definitions, actionable work is automatically pushed to collections agents or agent groups.
