**Nutrition** G. Subbulakshmi, Mandalika Subhadra, 2014      *Functional Foods* David L. Nelson, 2017 Food has significant societal historical and religious roles in addition to nutritional value. It represents cultures and customs, provides opportunities for sharing, giving and social interaction and offers nutrition pleasure and satisfaction. Technically, all foods are functional as they fulfill a basic human need and provide nutritive value. However, the term functional food implies an additional physiological benefit beyond meeting basic nutritional needs. Functional food is not only a dietary product providing basic nutritional function of supplying nutrients but it is also known as a health promoting and or disease preventing substance. Functional food has been recognised as a separate category in the food market and it is one of the world's most intensive areas of food product innovation. This book discusses the sources, health effects and future perspectives of functional foods.

**Functional Food and Human Health** Vibha Rani, Umesh C. S. Yadav, 2018-10-12 Global health and the increasing incidence of various diseases are a cause for concern and doctors and scientists reason that the diet, food habits and lifestyle are contributing factors. Processed food has reduced the nutritional value of our diet and although supplementing foods with various additives is considered an alternative, the long term impact of this is not known. Many laboratories around the world are working to identify various nutritional components in our daily food and their effect on human health. These have been classified as Nutraceuticals or functional food and they may have preventive and therapeutic effects in a number of pathologies associated with modern dietary habits and lifestyles. This book addresses various aspects of this issue, revitalizing the discussion and consolidating the latest research on nutritional and functional food and their effects in in vitro, in vivo and human clinical studies.
