## Personalized S For Babies:

**Personalized Nutrition for the Diverse Needs of Infants and Children** Dennis M. Bier, J. Bruce German, Bo Lönnerdal, 2008 Research shows that humans respond differently to diets and moreover that they display varying predispositions to many diet dependent metabolic and degenerative diseases. The focus of nutritional science is thus shifting from dietary guidelines for populations to individualized foods and diets. It is the aim of nutrigenomics to assign this human diversity in nutritional response to diet as well as the subsequent consequences to human health to specific genetic elements. At the same time evidence suggests that diet itself is a critical determinant of human diversity. Supplying answers to some crucial issues as well as identifying directions for further research and practical applications by the food industry this publication is an important source of information for all those involved in the subject of diet and individual responses.
