emphasis on those insects that act as vectors in the spread of diseases Insects that may be potential pests against humans and livestock are included focusing on their life cycles and physiology as a logical comprehension of mode of action of insecticides In addition there is a chapter on classical insecticides covering both approaches prior to the chemical era and classical chemical insecticides organochlorinated organophosphorus and carbamates for comparison with current trends in pest control The negative environmental effects that such insecticides have caused in nature such as poisonings bioaccumulation or toxic effects are highlighted It is hoped that the use of more specific agrochemicals and approaches may avoid or at least considerably reduce such severe and irreversible effects in nature The insecticides covered are considered from numerous points of views chemistry toxicological profile risk assessment legal status environmental behaviour and selectivity The most important families of currently used insecticides are covered and critical discussions about future perspectives are included with frequent comparisons to classical insecticides The following topics are covered in the book as greener alternatives to classical insecticides Pyrethrins and pyrethroids Neonicotinoids Spynosins Insect growth regulators Botanical insecticides Microbial insecticides Integrated Pest Management Programs IPM *Bibliographic Guide to Technology* New York Public Library.
