*Contesting The Future Of Nuclear Power: A Critical Global Assessment Of Atomic Energy* Benjamin K

Sovacool,2011-05-05 This book provides a concise but rigorous appraisal about the future of nuclear power and the presumed nuclear renaissance It does so by assessing the technical economic environmental political and social risks related to all aspects of the nuclear fuel cycle from uranium mills and mines to nuclear reactors and spent fuel storage facilities In each case the book argues that the costs of nuclear power significantly outweigh its benefits It concludes by calling for investments in renewable energy and energy efficiency as a better path towards an affordable secure and socially acceptable future The prospect of a global nuclear renaissance could change the way that energy is produced and used the world over Sovacool takes a hard look at who would benefit mostly energy companies and manufacturers and who would suffer mostly taxpayers those living near nuclear facilities and electricity customers This book is a must read for anyone even remotely concerned about a sustainable energy future and also for those with a specific interest in modern nuclear power plants
