Also included is The Dublin Declaration which identifies key aspects of innovation development, successes, concerns and interests in relation to ICT and education.

Planning of Eco-efficient Process Chains for Automotive Component

Manufacturing Christopher Schmidt, 2021-01-04 This book includes the introduction of emerging manufacturing technologies and planning cases with established technologies. The planning of eco efficient process chains is crucial for manufacturing companies. However, in the state of the art planning, various barriers exist towards the integration of the environmental dimension. Against this background, a concept for the integration of classic lean and environmental criteria into the three planning phases of process chains is presented. During concept planning, the Technology Assessment Tool supports planners in the identification of eco efficient technologies. During rough planning, the Value Stream Design Tool enables the derivation of a production line based on workpiece characteristics. For detailed planning, tools for eco efficient machine and process chain configuration are provided. Three case studies from large scale automotive component manufacturing with established and emerging technologies demonstrate the tool applicability.

Effective Cost Cutting in

Asia Karlheinz Zuerl, 2022-02-28 The days of cheap raw materials and energy sources are gone. Suppliers will demand price increases due to the rising costs of energy and materials. This book describes how your purchasing department is able to gain more profit for your company and includes new ideas for successful purchasing and supplier development in Asia. The author discusses how to reduce costs in productive BOM and non productive materials NPMs and how to calculate product and tool costs. As well, the book shows ways to negotiate your results with your suppliers in Asia and build an effective system of supplier relationship management.
