*a.* The ultimate source of variation. Individual mutations occur so rarely that mutation alone usually does not change allele frequency much.

*b.* A very potent agent of change. Individuals or gametes move from one population to another.

*c.* Inbreeding is the most common form. It does not alter allele frequency but changes the proportion of heterozygotes.

*d.* Statistical accidents. The random fluctuation in allele frequencies increases as population size decreases.

*e.* The only agent that produces adaptive evolutionary changes.
