Topics covered include content, audience, media industries, media ownership, privacy, violence, sports, social media, and piracy of media messages.

**Lights! Camera! Action and the Brain** Maher Bahloul, Carolyn Graham, 2012-01-17 **Lights Camera Action and the brain** The Use of Film in Education is about an innovative pedagogy whereby performing arts and digital production play a key role in teaching and learning. The book combines theory and practice as such it lays solid neurological foundations for film and media literacy and provides several relevant practical applications from worldwide scholars. The book contains thirteen chapters, three of which address a number of theoretical issues related to the camera and the brain, while the remaining ten are practical illustrations of the extent to which film and video are used as pedagogical tools. In the book preface Nikos Theodosakis, author of *The Director in the Classroom*, writes that the book contributors have built a wonderful bridge for us to travel over. In fact, the book chapters transcend age restrictions to include diverse age groups, children and young adults. The topics range from learning language and philosophy to learning about one's self, one's environment, and one's cultural identity. Much more importantly, the book addresses the needs of regular and special needs learners. Arts in general and films in particular are shown to display salient and dynamic roles in appealing to a wide variety of regular and special needs learners. In short, the book is highly beneficial to educators and to education managers; it will have the power to change teaching and the way the curriculum is perceived for several generations to come.

Theory of Media Literacy W. James Potter, 2004-04-29. Our society has become characterized by aggressive media. Information is constantly at our fingertips whether it be through the books, newspapers, and magazines we read, the television we watch, the radio stations to which we listen, or the computers that connect us to the world in a matter of seconds. We can try to limit our media exposure but it is impossible to avoid all media messages. As a result, we psychologically protect ourselves by automatically processing the media to which we are exposed. *Theory of Media Literacy: A Cognitive Approach* comprehensively explains how we absorb the flood of information in our media-saturated society and examines how we often construct faulty meanings from those messages. In this book, author W. James Potter enlightens readers on the tasks of information processing. By building on a foundation of principles about how humans think, *Theory of Media Literacy* examines decisions about filtering messages, standard schema to match meaning, and higher level skills to construct meaning. A central theme of Potter's theory is the locus that governs the degree to which a person is media literate. The locus is enriched by developing skills as well as good knowledge structures on five topics: media effects, media content, media industries, real world parameters, and the self. Key Features: Presents the first social scientific theory of the process of media literacy; Explores a broad range of literature on media literacy written during the past two decades; Focuses on how the human mind works, especially in this mass media-saturated society. *Theory of Media Literacy* is an essential resource to a wide audience within the media discipline. The book provides empirical researchers with direction to test the theory and extend our understanding of how the media affect individuals and society. Practitioners will find it helpful in developing strategies to achieve goals and, at the same time, avoid high risks of negative effects. In addition, new scholars will find it to be an excellent introduction to various media literacy research.
