*Teaching Today's Mathematics in the Middle Grades* Art Johnson, Kit Norris, 2006 *Teaching Today's Mathematics in the Middle Grades* provides current and future middle school teachers with the mathematics content essential concepts methodology activities and resources to both learn and teach mathematics in grades 5 to 8 The authors focus exclusively on the middle school learner and the middle school mathematics curriculum Although each chapter discusses foundational mathematics concepts from earlier grades and previews topics that will follow the middle grades the emphasis is on the middle school This selective focus allows for proper development of critical topics in the middle school such as proportionality algebraic thinking and the integral role of manipulatives Assessment practices and problem solving are also emphasized from the viewpoint of effective practices for middle school students Unique Features React and Reflect features prompt classroom discussions by asking the reader to think independently regarding a statement issue or concern Try This features ask the reader to solve a problem first or extend the current discussion by working on an extension of a problem By completing the problem first teachers are putting themselves in the place of their students helping the teacher discover first hand common misconceptions Numerous exercises and activities appear at the end of each chapter to reinforce student understanding of various topics and ensure mastery of the mathematics content The NCTM Principles and Standards are emphasized throughout the book beginning with a discussion in Chapter 1 Each of the content chapters 6-11 opens with the relevant NCTM content standards for that chapter In addition marginal icons highlight areas within the text in which the NCTM process standards are discussed Reviewers rave From the content organization and approach it is evident that the authors have years of teaching experience This gives the text authority Marina Krause California State University Long Beach The authors do an excellent job of presenting in sequential order essential concepts methodology activities and technological resources essential to assist the beginning math teacher in preparing to teach in the middle school program Gerald Jarmon North Carolina Central University **Math Advantage, Grade 8** Grace M. Burton, Harcourt Brace, 1998-05-22 [Practical Analysis in One Variable](#) Donald Estep, 2006-04-06 Background I was an eighteen year old freshman when I began studying analysis I had arrived at Columbia University ready to major in physics or perhaps engineering But my seduction into mathematics began immediately with Lipman Bers calculus course which stood supreme in a year of exciting classes Then after the course was over Professor Bers called me into his office and handed me a small blue book called *Principles of Mathematical Analysis* by W Rudin He told me that if I could read this book over the summer understand most of it and prove it by doing most of the problems then I might have a career as a mathematician So began twenty years of struggle to master the ideas in Little Rudin I began because of a challenge to my ego but this shallow reason was quickly forgotten as I learned about the beauty and the power of analysis that summer Anyone who recalls taking a serious mathematics course for the first time will empathize with my feelings about this new world into which I fell In school I

restlessly wandered through complex analysis analytic number theory and partial differential equations before eventually settling in numerical analysis But underlying all of this indecision was an ever present and ever growing appreciation of analysis An appreciation that still sustains my intellect even in the oft cynical world of the modern academic professional But developing this appreciation did not come easy to me and the presentation in this book is motivated by my struggles to understand the viii Preface most basic concepts of analysis To paraphrase J.
