Biological systems that are composed of interacting products of specific genetic interactions together with other and possibly changing environmental factors are called *biological networks*. Biological networks represent the spatial, temporal, and functional organization of biological systems and play a central role in understanding the organization and function of biological systems.

188. *Chlamydomonas* are a class of unicellular green microphytes. Typically they need water to survive. However, when in very dry places where the upper surface of the cell wall and smaller components of plasma and cytoplasmic membranes are exposed, they survive. During this process, what is the relationship? What is the mechanism?

Organic Compounds Study Guide Answers
