Neural Approaches to Dynamics of Signal Exchanges Anna Esposito,Marcos Faundez-Zanuy,Francesco Carlo Morabito,Eros Pasero,2019-09-18 The book presents research that contributes to the development of intelligent dialog systems to simplify diverse aspects of everyday life such as medical diagnosis and entertainment Covering major thematic areas machine learning and artificial neural networks algorithms and models and social and biometric data for applications in human computer interfaces it discusses processing of audio visual signals for the detection of user perceived states the latest scientific discoveries in processing verbal lexicon syntax and pragmatics auditory voice intonation vocal expressions and visual signals gestures body language facial expressions as well as algorithms for detecting communication disorders remote health status monitoring sentiment and affect analysis social behaviors and engagement Further it examines neural and machine learning algorithms for the implementation of advanced telecommunication systems communication with people with special needs emotion modulation by computer contents advanced sensors for tracking changes in real life and automatic systems as well as the development of advanced human computer interfaces The book does not focus on solving a particular problem but instead describes the results of research that has positive effects in different fields and applications

Variational Views in Mechanics Paolo Maria Mariano,2022-02-08 This volume provides a timely survey of interactions between the calculus of variations and theoretical and applied mechanics Chapters have been significantly expanded since preliminary versions appeared in a special issue of the Journal of Optimization Theory and Applications 184 1 2020 on Calculus of Variations in Mechanics and Related Fields The variety of topics covered offers researchers an overview of problems in mechanics that can be analyzed with variational techniques making this a valuable reference for researchers in the field It also presents ideas for possible future areas of research showing how the mastery of these foundational mathematical techniques can be used for many exciting applications Specific topics covered include Topology optimization Identification of material properties Optimal control Plastic flows Gradient polyconvexity Obstacle problems Quasi monotonicity Variational Views in Mechanics will appeal to researchers in mathematics solid states physics and mechanical civil and materials engineering **5th International Munich Chassis Symposium 2014** Peter E. Pfeffer,2014-07-18 The key drivers of innovation in the field of chassis systems are measures to improve vehicle dynamics and driving safety efforts to reduce fuel consumption and intelligent development methods In addition chassis development is focusing on enhancing ride comfort while also improving NVH characteristics At the same time modularization strategies concepts for the electrification of the powertrain and steps towards greater system connectivity are making increasingly complex demands on the chassis and its development Developers are being called upon to respond to these challenges with a variety of solutions
