Evaluating Geospatial Methods for Marketing Concert Tickets in Rock Music Meghan Gohil, 2020 Think back to the last concert you attended How did you find out about it Did you go by yourself or did you go with friends Past research shows that concert attendance is a group experience Many attendees will go with friends or in small groups Email marketing plays a critical role in informing potential customers about a show and subsequently driving ticket sales for the show Traditional email concert marketing targets past purchasers of the headliner artist as well as past purchasers of similar artists The author a veteran of the concert industry has observed that fans of artists are not randomly distributed spatially they tend to cluster Tobler's first law of geography states everything is related to everything else but near things are more related than distant things Tobler 1970 Does this apply to concert attendees Is location an effective method of determining likely customer behavior and if we marketed to customers in these clusters would they buy concert tickets Will fans of similar artists also attend the concert and can these similar artists be found through an artist classification algorithm The author conducted an experiment on an amphitheater tour for a well known national artist to test this question The experiment selected customer targets for an email campaign to compare traditional methods against an

algorithm built from both location and artist classification methodologies The author hypothesized that if location or artist classification influenced customer behavior then customers selected via the location based or artist classification method would show greater ticket sales compared to the traditional method Conversely if location or artist classification did not play a role then the traditional method would show greater ticket sales compared to the location based or artist classification method The results of the experiment showed a 137% increase in sales from location based and artist classification methods compared to the traditional method The conclusion that we can draw from these results is that location and artist classification is an effective determinant of customer behavior with regards to concerts and the use of location based and artist classification methods greatly increases the ticket sales and revenue for concerts
