

## Checking Fluid Leakage (Cont'd)

### CAUTION:

Do not hold the steering wheel in a locked position for more than 15 seconds.

4. If fluid leakage at connectors is noticed, loosen flare nut and then retighten.

Do not overtighten connector as this can damage O-ring, washer and connector.

## Bleeding Hydraulic System

1. Raise front end of vehicle until wheels clear ground.
2. Add fluid into oil tank to specified level. Meanwhile, quickly turn steering wheel fully to right and left and lightly touch steering stoppers. Repeat steering wheel operation until fluid level no longer decreases.

3. Start engine.

Repeat step 2 above.

- Incomplete air bleeding will cause the following to occur. When this happens, bleed air again.

- a. Generation of air bubbles in reservoir tank
- b. Generation of clicking noise in oil pump
- c. Excessive buzzing in oil pump

While the vehicle is stationary or while turning the steering wheel slowly, fluid noise may occur in the valve or oil pump. This noise is inherent in this steering system, and it will not affect performance or durability of the system.

## Checking Steering Wheel Turning Force

1. Park vehicle on a level, dry surface and set parking brake.
2. Start engine.
3. Warm up power steering fluid to adequate operating temperature.

Temperature of fluid:

Approximately 50 - 80°C (140 - 176°F).

Tires need to be inflated to normal pressure.

4. Check steering wheel turning force with engine idling when steering wheel has been turned 360° from neutral position.

Steering wheel turning force:

39 N (4 kg, 9 lb) or less
