web right triangles pythagorean theorem sines sin cosines cos tangents tan now suppose we know the hypotenuse and one side but have to find the other for example if 119 and 169 then  $119^2 + 120^2 = 14161$  and the square root of 14161 is 119 so 120 we might only know one side but we also know an

web a right triangle is a type of triangle that has one angle that measures  $90^\circ$  right triangles and the relationships between their sides and angles are the basis of trigonometry in a right triangle the side that is opposite of the  $90^\circ$  angle is the longest side of the triangle and is called the hypotenuse
