Pdf Competition In Telecommunications By Mit Press:

Governance of Communication Networks Brigitte Preissl, Jürgen Müller, 2007-01-30 Few would doubt the potential of information technology to connect individuals firms and organisations. Whether this will actually lead to the integration of markets and societies is a different issue. The articles collected in this book shed light on crucial considerations for the success of global communication networks. These include frameworks for regulation, inclusion of customers in defining product and service strategies, access to advanced technology and networks for all groups and more.

Access Pricing in Telecommunications OECD, 2004-01-30 This report addresses the regulation of access to telecommunication networks. Development of competition and the success of liberalisation often depend on the access terms and conditions chosen and public policy interest in getting these terms and conditions right is important.

The Economics of Antitrust and Regulation in Telecommunications Pierre A. Buigues, Patrick Rey, 2004-01-01 Contributing to a convergence of legal and economic approaches, *The Economics of Antitrust and Regulation in Telecommunications* integrates economic theory into current EU antitrust policy within the sector. The book addresses the role of competition and regulatory policies on a number of key issues in telecommunications such as market definition, collective dominance, access to networks and allocation of scarce resources.

Competition and Investment in Telecommunications and Media Markets Roberto Balmer, 2014-01-20 This book reviews the economic literature on cooperative investment in next generation broadband networks and geographic regulation. It additionally proposes innovative models for estimating the level of competition and investment in the fixed telephony market and the retail market for newspapers. In doing so, it addresses two hotly debated issues in business strategy and economic policy: the determinants of investment and competition and the impacts of innovative investment schemes. The first chapter reviews the literature on new cooperative investment schemes in next generation broadband networks and geographic regulation. The effects on competition, investment and welfare of such schemes crucially depend on the details of the agreements. For instance, in the case of joint ventures, the manner in which investment costs are shared and internal and external access prices are determined significantly impacts the outcome. In the case of long term access agreements, it is essential to consider how access tariffs are structured, whether they can adapt to market developments *ex post* and whether contracts are signed before or after the investment takes place. Generally, many of these agreements allow for some extent of risk sharing, offering the possibility of increasing investment incentives when firms are not risk neutral. It is suggested that regulators consider introducing regulated co-investment agreements complementing current regulation in addition to considering geographically segmented access prices. The second chapter assesses entry and competition in local retail markets for newspapers. It builds on the new empirical industrial organisation (NEIO) literature to estimate sustainable coverage and competitive effects of entry for Swiss newspaper sellers which sell composite goods (newspapers, food and other goods of daily use). An entry threshold ratio methodology is used, allowing for model estimation.

even when the range of products under examination is not exactly defined and when price and quantity data are not available It is found that under duopoly prices the market size of a Commune required for single firm entry is about twice as large as under monopoly prices A clear and quantifiable trade off between competition and investment therefore exists Moreover it is found that while a second entrant in this market strongly increases competition further entry doesn't have a significant additional competitive effect From a welfare perspective therefore it can be stated that two is enough to ensure competition in this market In the third chapter competition and market strategies in the Swiss fixed telephony market are assessed A market model based on a generalised version of the traditional dominant firm competitive fringe model is developed Direct estimation of the incumbent's intertemporal residual demand function is performed by instrumenting the market price with incumbent specific cost shifting variables as well as other variables The concrete estimates show that residual retail demand for voice traffic is highly inelastic Such a level of elasticity is only compatible with a profit maximising incumbent in the case of largely competitive conduct It is therefore found that the Swiss incumbent acted largely competitively and that current regulated telephony retail price caps could not be justified on the basis of a lack of competition
