Science of Sugar Confectionery William P Edwards, 2007-10-31 Confectionery is a topic close to many people's hearts and its manufacture involves some interesting science. The confectionery industry is divided into three classes chocolate flour and sugar confectionery. It is the background science of this latter category that is covered in *The Science of Sugar Confectionery*. The manufacture of confectionery is not a science based industry as these products have traditionally been created by skilled confectioners working empirically. In fact scientific understanding of the production process has only been acquired retroactively. Historically however sugar confectionery has had technological synergies with the pharmaceutical industry such as making sugar tablets and applying panned sugar coatings. This book gives an introduction to the subject with some basic definitions and commonly used ingredients and then moves on to discuss the chemistry of various types of sugar confectionery. These include sugar glasses, boiled sweets, grained sugar products, fondants, toffees and fudges, hydrocolloids, gums, pastilles and jellies and concludes with a chapter dedicated to sugar free confectionery.

Science of Sugar Confectionery William P Edwards, 2018-10-26 Since the first edition of *The Science of Sugar Confectionery* 2000 the confectionery industry has responded to ever changing consumer habits. This new edition has been thoroughly revised to reflect industry's response to market driven nutrition and dietary concerns as well as changes in legislation, labelling and technology. Building on the strengths of the first edition the author's personal knowledge and experience of the sugar confectionery industry is used to provide a thorough and accessible account of the field. Written so the reader needs no more than a rudimentary level of chemistry this book covers the basic definitions commonly used and new ingredients in the industry. It then discusses the various types of sugar confectionery including sugar glasses, boiled sweets, grained sugar products, fondants, toffees and fudges, hydrocolloids, gums, pastilles and jellies and concludes with a new chapter on future outlooks. Featuring expanded coverage of special dietary needs covering topics such as vegetarianism and veganism, religious requirements and supplemented products this new edition reflects current and evolving needs in the sugar confectionery field.
