Advanced Technologies for Meat Processing Fidel Toldrá, Leo M. L. Nollet, 2017-10-10. As with the first edition, the main goal of *Advanced Technologies for Meat Processing* is to provide the reader with recent developments in new advanced technologies for the full meat processing chain. This book is written by distinguished international contributors with recognized expertise and excellent reputations and brings together all the advances in a wide and varied number of technologies that are applied in different stages of meat processing. This second edition contains 21 chapters combining updated and revised versions of several chapters with entirely new chapters that deal with new online monitoring techniques like hyperspectral imaging and Raman spectroscopy, the use of nanotechnology for sensor devices or new packaging materials, and the application of omics technologies like nutrigenomics and proteomics for meat quality and nutrition. The book starts with the control and traceability of genetically modified farm animals, followed by four chapters reporting the use of online non-destructive monitoring techniques like hyperspectral imaging and Raman spectroscopy, real-time PCR for pathogens detection, and nanotechnology-based sensors. Then five chapters describe different advanced technologies for meat decontamination such as irradiation, hydrostatic and hydrodynamic pressure processing, other non-thermal technologies, and the reduction in contaminants generation. Nutrigenomics in animal nutrition and production is the object of a chapter that is followed by five chapters dealing with nutritional related issues like bioactive peptides, functional meats, fat and salt reduction, processing of nitrite-free products, and the use of proteomics for the improved processing of dry-cured meats. The last four chapters are reporting the latest developments in bacteriocins against meat-borne pathogens, the functionality of bacterial starters, modified atmosphere packaging, and the use of new nanotechnology-based materials for intelligent and edible packaging.

Polymerase Chain Reactions Dr. M. MUTHURAJ, Dr. B. USHARANI, Dr. S. ANBAZHAGI, Dr. C.K. VIDYA RAJ, Dr. K. VENKATESH, 2022-03-28 This book describes how to perform and optimize the various types of Polymerase Chain Reactions (PCR) for postgraduate students, scholars, and researchers in all branches of life science. PCR is a method widely used to rapidly make millions to billions of copies of specific DNA samples, allowing scientists to take a very small sample of DNA and amplify it or a part of it to a large enough amount to study in detail. This book also deals with molecular biology reagents, preparation and general laboratory procedures, equipment use, and safety precautions. The various forms of pathogenic agents drastically affect human society and bring human life notoriously. The correct and exact details of these creatures can be derived through the prompt diagnosis of pathogens as early as possible. The current form of diagnosis is molecular diagnostics, but optimization and standardization are most important for the exact quality of results. This book is written with the need to address the technical problems while optimizing the PCR reactions in mind. The same procedure is fully applicable whenever techniques are being handled in life science laboratories. The textbook encourages the persons who engage in microbiology, molecular biology, and life science laboratory to accept and implement basic concepts in various types of PCRs and develop in-house techniques for day-to-day routine activities. This book also deals with the major junk areas while designing primers for various types of PCRs and deals with how to address and troubleshoot the issues that arise while doing various forms of PCRs. This book also deals with post-PCR activities and troubleshooting of gel electrophoresis. **PCR** Julian Burke, 1996-12-16 This convenient spiral-bound laboratory manual saves readers valuable time by providing easily accessible information on key topics and protocols.
