Second Handbook of Research on Mathematics Teaching and Learning Frank K. Lester,2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as

pertinent information for conducting investigations that are informed by previous work The Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters reflects the mathematics education research community s willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community

Domain-Specific Languages Walid Mohamed Taha,2009-07-06 Dijkstra once wrote that computer science is no more about computers than astronomy is about telescopes Despite the many incredible advances in computer science from times that predate practical mechanical computing there is still a myriad of fundamental questions in understanding the interface between computers and the rest of the world Why is it still hard to mechanize many tasks that seem to be fundamentally routine even as we see ever increasing capacity for raw mechanical computing The disciplined study of domain specific languages DSLs is an emerging area in computer science and is one which has the potential to revolutionize the field and bring us closer to answering this question DSLs are formalisms that have four general characteristics They relate to a well defined domain of discourse be it controlling traffic lights or space ships They have well defined notation such as the ones that exist for prescribing music dance routines or strategy in a football game The informal or intuitive meaning of the notation is clear This can easily be overlooked especially since intuitive meaning can be expressed by many different notations that may be received very differently by users The formal meaning is clear and mechanizable as is hopefully the case for the instructions we give to our bank or to a merchant online
