the Second University of Naples SUN and the University of Naples Federico II Scientists from chemistry to physics to

engineering areas formed a homogeneous community as the contributions even if spanning very different topics subtend the

concept of timescale of polymer based materials In all about 150 papers were submitted by scientists from all over the world

The conference is organised in oral sessions subdivided into three main general topics namely Timescales of Polymers TP

Composites and Nano Composites Polymer Chemistry and Physics which included the following sub topics Viscoelasticity

Glassy State Thin Films Blends Organic Electronics OLED OTFT Polymer based Sensors Industrial Rheology Durability

Degradation Polymer Processing Tissue Engineering Foams Biomaterials Cultural Heritage Fracture and Yielding Properties

many papers selected from the general poster session The first part of the book spanned over the timescales of polymers in

absence of chemistry driven phenomena The time dependent behaviour of several classes of polymers was tackled from

different perspectives from soft matter physics to structural design approach The second section was mainly devoted to the

different aspects that influence the response properties of Nanocomposites as well as structural composites Many papers

focused on the promising perspectives of carbon nanotubes organically modified clays and metallic nanoparticles based

polymers Theoretical as well as experimental approaches were extensively addressed The third section was devoted to the

chemistry induced physical changes in polymers From optical properties to biocompatibility a wide range of systems was

presented The book is co edited by Alberto D'Amore and Domenico Acierno the co chairmen of the conference that pre

screened the submitted papers for topical applicability and by Luigi Grassia that with his invaluable support rendered
