Morphological Structure, Lexical Representation and Lexical Access (RLE Linguistics C: Applied Linguistics)

Dominiek Sandra, Marcus Taft, 2014-01-10 The main concern of this work is whether morphemes play a role in the lexical representation and processing of several types of polymorphemic words and more particularly at what precise representational and processing level The book comprises two theoretical contributions and a number of empirical ones One theoretical paper discusses several possible motivations for a morphologically organised mental lexicon like the economy of representation view and the efficiency of processing view and lays out the weaknesses that are associated with some of these motivations The other theoretical paper offers an interactive activation reinterpretation of the findings that were originally reported within the lexical search framework The empirical papers together cover a relatively broad array of language types and mainly deal with visual word recognition in normals in the context of lexical morphology derived and compound words Evidence is reported on the function of stems and affixes as processing units in prefixed and suffixed derivations The role of semantic transparency in the lexical representation of compounds is studied as is the effect of orthographic ambiguity on the parsing of novel compounds The inflection derivational distinction is approached in the context of Finnish a highly agglutinative language with much richer morphology than the languages usually studied in psycholinguistic experiments on polymorphemic words Two other contributions also approach the study object in the context of relatively uncharted domains one presents data on Chinese a language which uses a different script type logographic from the languages that are usually studied alphabetic script and another one presents data on language production

Morphological Structure, Lexical Representation and Lexical Access University of Antwerp,1994 **Morphology in the Reader's Mental Lexicon** Dominiek Sandra,1994 The work addresses the question whether morphemes play a role in lexical representation and processing Three hypotheses can be entertained i morphemes or a particular morpheme like the root might be needed to access a representation of the whole word or ii be used to express morphological relatedness at a postaccess level or iii be used to determine the meaning of the word These hypotheses are tested against experimental data on inflectional derivational and compound morphology The emerging picture is of a lexical architecture with two parallel access routes one making use of whole word access representations and postaccess connections between

morphosemantically related words and another one in which the meaning of the whole word is computed from its morphemes
Masked Priming Sachiko Kinoshita,Stephen J. Lupker,2004-06-02 This book showcases the advantages of masked priming as an alternative to more standard methods of studying language Morphological Aspects of Language Processing Laurie Beth Feldman,2013-05-13 It is now well established that phonological and orthographic codes play a crucial role in the recognition of isolated words and in understanding the sequences of words that comprise a sentence However words and sentences are organized with respect to morphological as well as phonological components It is thus unfortunate that the morpheme has received relatively little attention in the experimental literature either from psychologists or linguists Due to recent methodological developments however now is an opportune time to address morphological issues In the experimental literature there is a tendency to examine various psycholinguistic processes in English and then to assume that the account given applies with equal significance to English and to other languages Written languages differ however in the extent to which they capture phonological as contrasted with morphological units Moreover with respect to the morpheme languages differ in the principle by which morphemes are connected to form new words This volume focuses on morphological processes in word recognition and reading with an eye toward comparing morphological processes with orthographic and phonological processes Cross language comparisons are examined as a tool with which to probe universal linguistic processes and a variety of research methodologies are described Because it makes the experimental literature in languages other than English more accessible this book is expected to be of interest to many readers It also directs attention to the subject of language processing in general an issue which is of central interest to cognitive psychologists and linguists as well as educators and clinicians Morphology in the Mind Raymond Bertram,2000 **Current Index to Journals in Education** ,1996 Neurolinguistic Evidence of Some Conceptual Properties of Nouns and Verbs Margaret Kimberly Kellogg,1996 Index of Conference Proceedings British Library.
