**A Concise Introduction to Polymer Physics** Reinhard Hentschke, 2025-07-05 This textbook provides a concise and transparently structured one semester course in polymer physics the science in addition to polymer chemistry behind a class of ubiquitous materials It covers all major theoretical concepts and their applications in six chapters including the conformations of chains the thermodynamics of mixtures solutions and networks and the dynamics of polymers Selected topics highlight aspects of polymer mechanics the role of particulate fillers stable and labile liquid crystal polymers and polyelectrolytes Solved problems deepen and extend important points that are explained in the main chapters The emphasis is on the derivation of the results and not on their mere presentation If a result can be obtained using different theoretical methods or viewed from a different angle an attempt is made to explain the relationships between the methods as clearly as possible In addition the validation of theoretical results through suitable experiments is always included All this assumes a certain familiarity with statistical thermodynamics and its mathematics which means that the text is best suited for upper undergraduate level

**Transport Phenomena in Micro- and Nanoscale Functional Materials and Devices** Joao B. Sousa, Joao O. Ventura, Andre Pereira, 2021-03-26 Transport Phenomena in Micro and Nanoscale Functional Materials and Devices offers a pragmatic view on transport phenomena for micro and nanoscale materials and devices both as a research tool and as a means to implant new functions in materials Chapters emphasize transport properties TP as a research tool at the micro nano level and give an experimental view on underlying techniques The relevance of TP is highlighted through the interplay between a micro nanocarrier s characteristics and media characteristics long short range order and disorder excitations couplings and in energy conversions Later sections contain case studies on the role of transport properties in functional nanomaterials This includes transport in thin films and nanostructures from nanogranular films to graphene and 2D semiconductors and spintronics and from read heads MRAMs and sensors to nano oscillators and energy conversion from figures of merit micro coolers and micro heaters to spin caloritronics Presents a pragmatic description of electrical transport phenomena in micro and nanoscale materials and devices from an experimental viewpoint Provides an in depth overview of the experimental techniques available to measure transport phenomena in micro and nanoscale materials Features case studies to illustrate how each technique works Highlights emerging areas of interest in micro and nanomaterial transport phenomena including spintronics

**Multiscale Modeling and Simulation in Science** Björn Engquist, Per Lötstedt, Olof Runborg, 2009-02-11 Most problems in science involve many scales in time and space An example is turbulent flow where the important large scale quantities of lift and drag of a wing depend on the behavior of the small

vortices in the boundary layer Another example is chemical reactions with concentrations of the species varying over seconds and hours while the time scale of the oscillations of the chemical bonds is of the order of femtoseconds A third example from structural mechanics is the stress and strain in a solid beam which is well described by macroscopic equations but at the tip of a crack modeling details on a microscale are needed A common difficulty with the simulation of these problems and many others in physics chemistry and biology is that an attempt to represent all scales will lead to an enormous computational problem with unacceptably long computation times and large memory requirements On the other hand if the discretization at a coarse level ignores the fine scale information then the solution will not be physically meaningful The inclusion of the fine scales must be incorporated into the model This volume is the result of a Summer School on Multiscale Modeling and Simulation in Science held at Bosön Lidingö outside Stockholm Sweden in June 2007 Sixty PhD students from applied mathematics the sciences and engineering participated in the summer school Scientific and Technical Aerospace Reports, 1992
