International Register of Ornamental Plant Cultivars: Laurence Hatch, Mark Summers, 2018-06-07 Hardy herbaceous perennials make up a major part of our gardens in the world. For mostly political reasons there is no formal process for cataloging or registering new varieties or cultivars of these important plants which sell in the billions per year. In 2013 the Open Registration Of Cultivars OROC aka Oh rock program was created to provide a worldwide guide to new hardy herbaceous plants. This Fall 2018 edition provides 77 pages of plant descriptions, images and links to buy to study the new plants in the public interest. It is 100% free.

The End... Prophetic Insights into the Last Days: Alison Brown, 2013-04-07 An amazing insight into end times prophecy. Dr Brown writes from a messianic perspective revealing how the Feasts and current world events tie in with Biblical and even Islamic prophecies. A must read for all those interested in what is about to happen in these last days.

Geocomputation: Chris Brunsdon, Alex Singleton, 2015-01-22 Geocomputation is the use of software and computing power to solve complex spatial problems. It is gaining increasing importance in the era of the big data revolution of smart cities of crowdsourced data and of associated applications for viewing and managing data geographically like Google Maps. This student focused book provides a selection of practical examples of geocomputational techniques and hot topics written by world leading practitioners. Integrates supporting materials in each chapter such as code and data enabling readers to work through the examples themselves. Chapters provide highly applied and practical discussions of Visualisation and exploratory spatial data analysis, Space time modelling, Spatial algorithms, Spatial regression and statistics. Enabling interactions through the use of neogeography. All chapters are uniform in design and each includes an introduction, case studies, conclusions drawing together the generalities of the introduction and specific findings from the case study, application and guidance for further reading. This accessible text has been specifically designed for those readers who are new to Geocomputation as an area of research showing how complex real world problems can be solved through the integration of technology, data and geocomputational methods. This is the applied primer for Geocomputation in the social sciences.

Moons: David A. Rothery, 2015-11-26 Proving to be both varied and fascinating, moons are far more common than planets in our Solar System. Our own Moon has had a profound influence on Earth not only through tidal effects but even on the behaviour of some marine animals. Many remarkable things have been discovered about the moons of the giant outer planets from Voyager, Galileo, Cassini and other spacecraft. Scientists have glimpsed volcanic activity on Io, found oceans of water on Titan and captured photos of icy geysers bursting from Enceladus. It looks likely that microbial life beyond the Earth may be discovered on a moon rather than a planet. In this Very Short Introduction, David Rothery introduces the reader to the moons of our Solar System, beginning with the early discoveries of Galileo and others, describing their variety of mostly mythological names and the early use of Jupiter's moons to establish position at sea and to estimate the speed of light. Rothery discusses the structure, formation and influence of our Moon and those of the other planets and ends with the recent

discovery of moons orbiting asteroids whilst looking forward to the possibility of finding moons of exoplanets in planetary systems far beyond our own **ABOUT THE SERIES** The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable *Digital Diplomacy in Indonesia's Foreign Policy* Albert Triwibowo,2025-06-02 This book introduces the developments and practices of digital diplomacy in Indonesia's foreign policy to support diplomatic practice The analysis focuses on Indonesia's digital diplomacy specifically its implementation by the Indonesian Ministry of Foreign Affairs and its Missions in selected locations to achieve the country's foreign policy objectives Specific case studies on palm oil the Rohingya crisis and the COVID 19 pandemic are used to show how Indonesia's digital diplomacy is executed and performed Arguing that Indonesian digital diplomacy follows a bottom up approach model in its development the author demonstrates that Indonesia's digital diplomacy is related to state to state communication as well as state to public communication It is also utilised for communicating sensitive issues as Indonesia is still in the first stage of digital diplomacy and is influenced by domestic interests counternarrative interests and information dissemination motives The book is a valuable addition to the study of digital diplomacy specifically from the experience and perspective of a middle power country It will be of interest to researchers in International Relations Asian Politics *Analogs for Planetary Exploration* W. Brent Garry,Jacob E. Bleacher,2011 Where on Earth is it like Mars How were the Apollo astronauts trained to be geologists on the Moon Are volcanoes on Earth just like the ones on other planets The exploration of our solar system begins in our own backyard Discoveries on other planetary bodies cannot always be easily explained Therefore geologic sites on this planet are used to better understand the extraterrestrial worlds we explore with humans robots and satellites *Analogs for Planetary Exploration* is a compilation of historical accounts of astronaut geology training overviews of planetary geology research on Mars educational field trips to analog sites plus concepts for future human missions to the Moon This Special Paper provides a great overview of the science training and planning related to planetary exploration for students educators researchers and geology enthusiasts After all as we learn about the solar system we can better understand our own planet Earth
