Smartphone-Based Real-Time Digital Signal Processing Nasser Kehtarnavaz, Abhishek Sehgal, Shane Parris, 2018-12-17 Real time or applied digital signal processing courses are offered as follow ups to conventional or theory oriented digital signal processing courses in many engineering programs for the purpose of teaching students the technical know how for putting signal processing algorithms or theory into practical use These courses normally involve access to a teaching laboratory that is equipped with hardware boards in particular DSP boards together with their supporting software A number of textbooks have been written discussing how to achieve real time implementation on these hardware boards This book discusses how to use smartphones as hardware boards for real time implementation of signal processing algorithms as an alternative to the hardware boards that are used in signal processing laboratory courses The fact that mobile devices in particular smartphones have become powerful processing platforms led to the development of this book enabling students to use their own smartphones to run signal processing algorithms in real time considering that these days nearly all students possess smartphones Changing the hardware platforms that are currently used in applied or real time signal processing courses to smartphones creates a truly mobile laboratory experience or environment for students In addition it relieves the cost burden associated with using dedicated signal processing boards noting that the software development tools for

smartphones are free of charge and are well maintained by smartphone manufacturers This book is written in such a way that it can be used as a textbook for real time or applied digital signal processing courses offered at many universities Ten lab experiments that are commonly encountered in such courses are covered in the book This book is written primarily for those who are already familiar with signal processing concepts and are interested in their real time and practical aspects Similar to existing real time courses knowledge of C programming is assumed This book can also be used as a self study guide for those who wish to become familiar with signal processing app development on either Android or iPhone smartphones *Signal Processing and Machine Learning with Applications* Michael M. Richter, Sheuli Paul, Veton Këpuska, Marius Silaghi, 2022 Signal processing captures, interprets, describes, and manipulates physical phenomena Mathematics, statistics, probability, and stochastic processes are among the signal processing languages we use to interpret real world phenomena, model them, and extract useful information. This book presents different kinds of signals humans use and applies them for human machine interaction to communicate. *Signal Processing and Machine Learning with Applications* presents methods that are used to perform various Machine Learning and Artificial Intelligence tasks in conjunction with their applications. It is organized in three parts: Realms of Signal Processing, Machine Learning and Recognition, and Advanced Applications and Artificial Intelligence. The comprehensive coverage is accompanied by numerous examples, questions with solutions, and historical notes. The book is intended for advanced undergraduate and postgraduate students, researchers, and practitioners who are engaged with signal processing, machine learning, and the applications.

Applied Signal Processing Thierry Dutoit, Ferran Marques, 2010-06-10 *Applied Signal Processing: A MATLAB Based Proof of Concept* benefits readers by including the teaching background of experts in various applied signal processing fields and presenting them in a project oriented framework. Unlike many other MATLAB based textbooks which only use MATLAB to illustrate theoretical aspects, this book provides fully commented MATLAB code for working proofs of concept. The MATLAB code provided on the accompanying online files is the very heart of the material. In addition, each chapter offers a functional introduction to the theory required to understand the code as well as a formatted presentation of the contents and outputs of the MATLAB code. Each chapter exposes how digital signal processing is applied for solving a real engineering problem used in a consumer product. The chapters are organized with a description of the problem in its applicative context and a functional review of the theory related to its solution appearing first. Equations are only used for a precise description of the problem and its final solutions. Then a step by step MATLAB based proof of concept with full code, graphs, and comments follows. The solutions are simple enough for readers with general signal processing background to understand and they use state of the art signal processing principles. *Applied Signal Processing: A MATLAB Based Proof of Concept* is an ideal companion for most signal processing course books. It can be used for preparing student labs and projects.
