Data Privacy and Competition Law in the Age of Big Data Samson Y. Esayas, 2024-06-24 The monetization of personal data has become an increasingly common business practice igniting global debate on the interface between data privacy law and competition law. *Data Privacy and Competition Law in the Age of Big Data* provides a comprehensive novel and interdisciplinary analysis of this nexus. Drawing

insights from emergent properties and complexity science the book exposes the commonalities and conflicts between how data privacy law and competition law address challenges resulting from the commercialization of personal data Samson Y Esayas begins by identifying key shifts in big data the growing trend of processing personal data for diverse purposes the aggregation of data across various operations and the shift from offering stand alone products and services to ecosystems of several with personal data central in connecting the different markets These shifts engender a complex economic landscape marked by multiple actors a web of interactions and non linear emergent outcomes Despite this complexity the prevailing approach to data privacy law and competition law emphasises isolated units of analysis whether a relevant market or a distinct processing operation This approach overlooks system wide emergent risks borne of cumulative processing operations and cross market practices Additionally a mindset focused on either data privacy law or competition law overlooks the increasing intersection between the two regimes missing opportunities for synergy In light of these challenges Esayas s volume calls for recalibrating data privacy law and competition law for a complex economy emphasizing a holistic systems level perspective that addresses emergent harms and a polycentric strategy that leverages the strengths of each legal regime
