Concept Development in Nursing Beth L. Rodgers, Kathleen Astin Knafl, 2000 This book presents state of the art methods for developing concepts appropriate for nursing It presents a wide array of approaches to concept developments ranging from the classic to the cutting edge in a matter that balances philosophical foundations with techniques and practical examples Explores approaches ranging from the classic to constructivist to critical or postmodern Balances philosophy and methods illustrating each method with a complete example of a specific concept developed using that method Theoretical Nursing Afaf Ibrahim Meleis, 2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop

theories Theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences And an implicit assumption was made that there should be a single strategy for theory development some claiming to begin the process from practice and others believing it should be driven by research Provided by publisher
