*Occupational Science* Jerry A. Johnson, Elizabeth J. Yerxa, 1990 Representing one of the most visionary concepts about occupational therapy practice and education available today *Occupational Science The Foundation for New Models of Practice* introduces the notion of a basic science of occupation Specifically this provocative volume proposes that the profession of occupational therapy in collaboration with other relevant scientific disciplines develop a science of occupation that would provide a foundation for occupational therapy practice The development of an occupational science is desirable since occupation and its meaning for and application to human life are unique to occupational therapy and embody the principles upon which the profession was founded The forward thinking authors discuss the relevance of this potential science propose arguments for its acceptance and support by members of the profession and provide illustrations that suggest its application in practice Certain to provoke serious discussion among occupational therapists this revolutionary book offers new potential and possibilities for the continuing growth of occupational therapy as a scientific discipline and as a profession *Occupational Science* introduces the idea of a basic science of occupation which studies the human as an occupational being demonstrates the application of occupational science to occupational therapy practice provides innovative models of occupational therapy practice to improve the capacities of people who have chronic disability and to prevent incapacity in those at risk

Pierce,2014 Occupational Science for Occupational Therapy shows how different types of occupational science research support occupational therapy The book is research based and moves firmly away from presenting theories and models that are unsupported by research within the field The book regards occupational therapy as actively involved in producing a science highly responsive to its knowledge needs instead of as a profession that consumes and applies research that is produced within other disciplines and for other purposes Provided by publisher *Illuminating The Dark Side of Occupation* Rebecca Twinley,2020-10-18 This innovative volume introduces Twinley s concept of The Dark Side of Occupation Focused on less explored and under addressed occupations it is an idea which challenges traditional assumptions around the positive beneficial health promoting relationship between occupation and health Emphasising that people s individual experiences of occupations are not always addressed and may not always be legal socially acceptable or conducive to good health the book investigates how these experiences can be explored theoretically in practice and research and in curriculum content for those learning about occupation Beginning with a discussion of some assumptions and misunderstandings that have been made about the concept the substantive chapters present and analyse tangible examples of the concept s applicability This ground breaking and practice changing text provides ideas for future research and highlights contemporary internationally relevant issues and concerns such as the coronavirus pandemic This book is an essential purchase for students in occupational therapy and science and valuable supplementary reading for practitioners It is also relevant to a wide interdisciplinary audience with an interest in human occupation encompassing anthropologists councillors criminologists nurses and human geographers

**Meaningful Living Across the Lifespan: Occupation-Based Intervention Strategies for Occupational Therapists and Scientists** Nick Pollard,Moses N. Ikiugu,2015-02-09 In this book Ikiugu and Pollard explore the notion of meaningfulness in the light of Viktor Frankl s 1992 assertions that the will to meaning is the primary motivation for behavior in human existence and that the frustration of the pursuit for meaning in the modern and Western world constituted what he termed existential vacuum leading in turn to what he called noogenic neurosis or the disease of meaninglessness The authors then show how occupation can be used in meaning making to counter the disease of meaninglessness Though the notion of the notion of meaningfulness is central to occupational therapy practice AOTA 2008 it

has never really been investigated in depth in the profession's literature. This book is aimed at occupational therapy and occupational science students, occupational therapy clinicians, and occupational scientists. Each chapter begins with learning objectives, personal growth objectives, and definition of key terms, followed by the content and finally by self-exploration exercise. This approach makes the book applicable to students who are studying the relationship between occupation and meaningful living. The exercises are experiential, making it possible for people to apply these concepts in their own lives. This is a unique new approach which has not been used much in occupational therapy and occupational science literature before. The approach has been tested by the authors' teaching experience on the philosophical and theoretical foundations of occupational therapy and the therapeutic use of self.

About the authors: Moses N. Ikiugu is Professor of Occupational Therapy, University of South Dakota, USA. Nick Pollard is Senior Lecturer in Occupational Therapy, Sheffield Hallam University, UK.

About the Series: Critical Studies in Occupational Therapy and Occupational Science. This book is the first in this new series. Future titles include *Critical Debates on the Science and Art of Occupational Therapy* by Alison Blank and Rod Lambert, and *Occupation Based Practice for Social Inclusion* by Nick Pollard, Sarah Kantartzis, and Hanneke Van Bruggen.
