**Middleware Architecture** Mehdia Ajana El Khaddar, 2021-12-22 Middleware refers to the intermediate software layer that bridges the gap between the heterogeneous hardware platforms

and the backend applications requirements. It allows providing common services and programming abstractions and hiding the low level management of the connected hardware. With the recent advances in distributed systems and enabling technologies such as RFID, WSNs, IoT, IoE, cloud computing, context aware, pervasive computing, ubiquitous computing, etc., middleware design and development has become a necessity, taking increasing importance. This book provides a comprehensive overview of the different design patterns and reference models used in middleware architectures in general, followed by a description of specific middleware architectures dedicated to the use of the different emerging technologies such as IoT, cloud computing, IEEE 802.11, etc. This book intends therefore to bring together in one place up to date contributions and remaining challenges in this fast moving research area for the benefit of middleware systems designers and applications developers.

**Middleware Solutions for the Internet of Things** Flávia C. Delicato, Paulo F. Pires, Thais Batista, 2013-09-21

After a brief introduction and contextualization on the Internet of Things (IoT) and Web of Things (WoT) paradigms, this timely new book describes one of the first research initiatives aimed at tackling the several challenges involved in building a middleware layer infrastructure capable of realizing the WoT vision: the SmartSensor infrastructure. It is based on current standardization efforts and designed to manage a specific type of physical devices: those organized to shape a Wireless Sensor Network (WSN) where sensors work collaboratively, extracting data and transmitting it to external networks to be further analysed and processed. *Middleware Solutions for the Internet of Things* describes this infrastructure and its RESTful based programming model that allows developers create applications without having specific knowledge about physical devices or networking environments. It is also shown step by step how to create a Web Mashup application using SmartSensor.
