**Multimedia**, **The New Walford Guide to Reference Resources** Ray Lester, 2005 The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information saving you precious time and effort For those looking for a selective and evaluative reference resource that really delivers on its promise look no further In addition to print sources The New Walford naturally covers an extensive range of e reference sources such as digital databanks digital reference services electronic journal collections meta search engines networked information services open archives resource discovery services and websites of premier organizations in both the public and private sectors But rather than supplying a list of all available known resources as a web search engine might The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful With an emphasis on quality and sustainability the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the relevant literature This ensures that The New Walford is clear easy to use and intuitive Publisher DayWater Daniel R. Thevenot, 2008-03-15 The European DayWater project has developed a prototype of an Adaptive Decision Support System ADSS related to urban stormwater pollution source control The DayWater ADSS greatly facilitates decision making for stormwater source control which is currently impeded by the large number of stakeholders involved and by the necessary multidisciplinary knowledge This book presents the results of this project providing new insights into both technical and management issues The main objectives of its technical chapters are pollution source control modelling risk and impact assessment and evaluation and comparison of best management practices It also covers management aspects such as the analysis of the decision making processes in stormwater source control at a European scale and stormwater management strategies in general The combination of scientific technical and socio managerial knowledge with the strong cooperation of numerous end users reflects the innovative character of this book which includes actual applications of the ADSS prototype in significant case studies DayWater an Adaptive Decision Support

System for Urban Stormwater Management contains 26 chapters collectively prepared by DayWater scientific partners and end users associated with this European Research and Development project. It includes a general presentation of the DayWater Adaptive Decision Support System ADSS structure and operation modes. A detailed description of the major components of this ADSS prototype. The assessment of its components in significant case studies in France, Germany, and Sweden. The proceedings of the International Conference on Decision Support Systems for Integrated Urban Water Management held in Paris on 3-4 November 2005. The book presents the ADSS prototype including a combination of freely accessible on-line databases, guidance documents, road maps, and modelling or multi-criteria analysis tools. As demonstrated in several significant case studies, the challenge for stormwater managers is to make the benefits of urban stormwater management visible to society, resulting in active co-operation of a diversity of stakeholders. Only then will sustainable management succeed. DayWater, an Adaptive Decision Support System for Urban Stormwater Management, advances this cause of sustainable urban management through Urban stormwater management and makes it achievable by means of risk and vulnerability tools which are included in the goal of integrated urban water management IUWM.

*Complex Systems, Smart Territories and Mobility* Patricia Sajous, Cyrille Bertelle, 2021-01-27. This book reflects the outcome of contribution by the plural community and of the interactions between disciplines. With the mass of data available through Information and Communication Technologies (ICT) in an unprecedented quantity since the Human History, it is now possible to access dimensions of knowledge that though not hidden, could not be grasped in the same way in the past. The question of how this information can be used for the benefit of institutional and economic actors to foster the development of a territory. Tackling the issue from a resolutely interdisciplinary perspective, the authors explore the theories and methods of complex systems in order to discuss how they can contribute in these new circumstances to territorial intelligence and to the development practices in which it is embodied. This book illustrates how today's research explores the multiple facets of territorial systems in order to reproduce their richness. It invites readers to learn about the challenges, ideas, results, and advances present in this domain.
