Lawton, P.A. Miescher, H.J. Mueller-Eberhard, 1979-08 The subject of immune deficiency has become of special importance for two reasons First conditions with well defined defects in the immune system could be analyzed as experiments of nature in terms of finding out the accurate biological relevance of the defective link in the immune system Secondly the recognition of immune deficiency states has become important in order to provide the patients with the treatment necessary to remedy these defects With regard to immune deficiency states in patients these have been

instrumental as experiments of nature in the revelation by Drs Good and Cooper and their associates of the two component structure of the immune system a discovery which can be considered as a major breakthrough in the history of immunopathology Today's research allows us to go far beyond this basic two component structure with the assessment of disorders affecting either cell to cell interactions or regarding subsets of lymphocyte populations Furthermore the association of immune deficiency with distinct enzymatic defects of purine metabolism is opening the door to the molecular level of immune deficiency Dr Cooper and Dr Lawton have succeeded in obtaining the collaboration of the leaders in the field of immune deficiency In view of the importance of their contributions in scientific and clinical terms we decided to prepare a book version of the two issues of Seminars in Immunopathology devoted to this subject **Basic Immunology: Functions and Disorders of the Immune System With STUDENT CONSULT Online Access** Abul K.
