Optimal Control De Gruyter Textbook:

Math for the Digital Factory Luca Ghezzi, Dietmar Hömberg, Chantal Landry, 2017-10-30 This volume provides a unique collection of mathematical tools and industrial case studies in digital manufacturing. It addresses various topics ranging from models of single production technologies, production lines, logistics and workflows to models and optimization strategies for energy consumption in production. The digital factory represents a network of digital models and simulation and 3D visualization methods for the holistic planning, realization, control and ongoing improvement of all factory processes related to a specific product. In the past ten years, all industrialized countries have launched initiatives to realize this vision, sometimes also referred to as Industry 4.0 in Europe or Smart Manufacturing in the United States. Its main goals are reconfigurable, adaptive and evolving factories capable of small scale production, high performance production combining flexibility, productivity, precision and zero defects, energy and resource efficiency in manufacturing. None of these goals can be achieved without a thorough modeling of all aspects of manufacturing together with a multi scale simulation and optimization of process chains. In other words, without mathematics. To foster collaboration between mathematics and industry in this area, the European Consortium for Mathematics in Industry (ECMI) founded a special interest group on Math for the Digital Factory (M4DiFa). This book compiles a selection of review papers from the M4DiFa kick off meeting held at the Weierstrass Institute for Applied Analysis and Stochastics in Berlin, Germany, in May 2014. The workshop aimed at bringing together mathematicians working on modeling, simulation and optimization with researchers and practitioners from the manufacturing industry to develop a holistic mathematical view on digital manufacturing. This book is of interest to practitioners from industry who want to learn about important mathematical concepts as well as to scientists who want to find out about an exciting new area of application that is of vital importance for today's highly industrialized and high wage countries.

CONTROLO 2024 Antonio Pedro Aguiar, Paula Rocha Malonek, Vítor Hugo Pinto, Fernando A. C. C. Fontes, Roman Chertovskih, 2025-04-22 This book offers a perfect insight of the latest research and developments in the fields of dynamic systems and control engineering. Gathering the proceedings of the 16th APCA International Conference on Automatic Control and Soft Computing (CONTROLO 2024) held on July 17-19, 2024, in Porto, Portugal, this volume covers a wide range of theoretical and practical issues relating to the development and use of different control approaches such as PID control, adaptive control, non linear control, intelligent monitoring and control based on fuzzy and neural systems. Further topics include robust control systems and real time control. Sensors and actuators, measurement systems, renewable energy systems, aeronautic and aerospace systems as well as industrial control and automation are also comprehensively covered. All in all, this book offers a timely and thorough survey of the latest research in the fields of dynamic systems and automatic control engineering and a source of inspiration for researchers and professionals worldwide.

Optimal Control of ODEs and DAEs Matthias Gerdts,2011-12-23 The intention of this textbook is to provide both the theoretical and computational tools that are necessary to investigate and to solve optimal control problems with ordinary differential equations and differential algebraic equations An emphasis is placed on the interplay between the continuous optimal control problem which typically is defined and analyzed in a Banach space setting and discrete optimal control problems which are obtained by discretization and lead to finite dimensional optimization problems The book addresses primarily master and PhD students as well as researchers in applied mathematics but also engineers or scientists with a good background in mathematics and interest in optimal control The theoretical parts of the book require some knowledge of functional analysis the numerically oriented parts require knowledge from linear algebra and numerical analysis Examples are provided for illustration purposes

Optimization Simon Serovajsky,2024-07-30 Optimization 100 Examples is a book devoted to the analysis of scenarios for which the use of well known optimization methods encounter certain difficulties Analysing such examples allows a deeper understanding of the features of these optimization methods including the limits of their applicability In this way the book seeks to stimulate further development and understanding of the theory of optimal control The study of the presented examples makes it possible to more effectively diagnose problems that arise in the practical solution of optimal control problems and to find ways to overcome the difficulties that have arisen Features Vast collection of examples Simple accessible presentation Suitable as a research reference for anyone with an interest in optimization and optimal control theory including mathematicians and engineers Examples differ in properties i e each effect for each class of problems is illustrated by a unique example Simon Serovajsky is a professor of mathematics at Al Farabi Kazakh National University in Kazakhstan He is the author of many books published in the area of optimization and
