Electric Vehicle Compare Tutorial:

Analysis and Comparison of Metaheuristics Erik Cuevas, Omar Avalos, Jorge Gálvez, 2022-11-02 This book presents a comparative perspective of current metaheuristic developments which have proved to be effective in their application to several complex problems. The study of biological and social entities such as animals, humans, or insects that manifest a cooperative behavior has produced several computational models in metaheuristic methods. Although these schemes emulate very different processes or systems, the rules used to model individual behavior are very similar. Under such conditions, it is not clear to identify which are the advantages or disadvantages of each metaheuristic technique. The book is compiled from a teaching perspective. For this reason, the book is primarily intended for undergraduate and postgraduate students of Science, Electrical Engineering, or Computational Mathematics. It is appropriate for courses such as Artificial Intelligence, Electrical Engineering, Evolutionary Computation. The book is also useful for researchers from the evolutionary and engineering communities. Likewise, engineer practitioners who are not familiar with metaheuristic computation concepts will appreciate that the techniques discussed are beyond simple theoretical tools since they have been adapted to solve significant problems that commonly arise in engineering areas.

Plug In Electric Vehicles in Smart Grids Sumedha Rajakaruna, Farhad Shahnia, Arindam Ghosh, 2014-11-29 This book covers the recent research advancements in the area of charging strategies that can be employed to accommodate the anticipated high deployment of Plug-in Electric Vehicles (PEVs) in smart grids. Recent literature has focused on various potential issues of uncoordinated charging of PEVs and methods of overcoming such challenges. After an introduction to charging coordination paradigms of PEVs, this book will present various ways the coordinated control can be accomplished. These innovative approaches include hierarchical coordinated control model, predictive control, optimal control strategies to minimize load variance, smart PEV load management based on load forecasting, integrating renewable energy sources such as photovoltaic arrays to supplement grid power using wireless communication networks to coordinate the charging load of a smart grid, and using market price of electricity and customers' payment to coordinate the charging load. Hence, this book proposes many new strategies proposed recently by the researchers around the world to address the issues related to coordination of charging load of PEVs in a future smart grid.

Non-Petroleum Automotive Transportation Carl Arthur MacCarley, 2025-07-17 Non Petroleum Automotive Transportation addresses the broad topic of energy and environmental sustainability for automotive transportation in a balanced, comprehensive, and readable way. Readers will gain a basic understanding of the characteristics, advantages, and limitations of all viable alternatives to fossil fuels, as well as the basics of internal combustion engines. Fuels include ethanol, methanol, hydrogen, biodiesel, biomethane, natural gas, ammonia, dimethyl ether, and synthetic fuels. Methods to calculate the carbon emissions and power output limits for each are covered. The technologies, operation efficiency, and overall emissions of battery electric, hybrid electric, and hydrogen fuel cell vehicles will be analyzed and compared with all other

vehicle fueling options Also covered are the fueling and charging infrastructure challenges energy resource requirements indirect environmental impacts safety and economic ramifications of the transition from gasoline and diesel fuel to electric and renewable fuels The interdependence of transportation with solar wind electric energy storage and emerging renewable energy sources is discussed The book concludes with an overview of the effect of incentives and carbon credits on the direction of automotive energy and suggestions for future career and investment opportunities enabled by this revolution

Overviews and Viewpoints Ronald K Jurgen,2010-11-29 With production and planning for new electric vehicles gaining momentum worldwide this book the first in a series of five volumes on this subject provides engineers and researchers with perspectives on the most current and innovative developments regarding electric and hybrid electric vehicle technology design considerations and components This book features 12 SAE technical papers published from 2008 through 2010 that provide an overview of research on topics such as The CO2 benefits of electrification The effects of aggressive driving behavior Heat recovery in hybrid vehicles The impact of drive cycles on PHEV component requirements Energy management strategies using game theory and other approaches

Power Engineering Viorel Badescu,George Cristian Lazaroiu,Linda Barelli,2018-12-07 Traditionally power engineering has been a subfield of energy engineering and electrical engineering which deals with the generation

transmission distribution and utilization of electric power and the electrical devices connected to such systems including

generators motors and transformers Implicitly this perception is associated with the generation of power in large hydraulic thermal and nuclear plants and distributed consumption Faced with the climate change phenomena humanity has had to now contend with changes in attitudes in respect of environment protection and depletion of classical energy resources These have had consequences in the power production sector already faced with negative public opinions on nuclear energy and favorable perception of renewable energy resources and about distributed power generation The objective of this edited book is to review all these changes and to present solutions for future power generation Future energy systems must factor in the changes and developments in technology like improvements of natural gas combined cycles and clean coal technologies carbon dioxide capture and storage advancements in nuclear reactors and hydropower renewable energy engineering power to gas conversion and fuel cells energy crops new energy vectors biomass hydrogen thermal energy storage new storage systems diffusion modern substations high voltage engineering equipment and compatibility HVDC transmission with FACTS advanced optimization in a liberalized market environment active grids and smart grids power system resilience power quality and cost of supply plug in electric vehicles smart metering control and communication technologies new key actors as prosumers smart cities The emerging research will enhance the security of energy systems safety in operation protection of environment improve energy efficiency reliability and sustainability The book reviews current literature in the advances innovative options and solutions in power engineering It has been written for researchers engineers technicians and graduate and doctorate students interested in power engineering
