## Nice Book Apes View Human Evolution:

An Ape's View of Human Evolution Peter Andrews, 2016-01-07 Our closest living relatives are the chimpanzee and bonobo. We share many characteristics with them but our lineages diverged millions of years ago. Who in fact was our last common ancestor? Bringing together ecology, evolution, genetics, anatomy, and geology, this book provides a new perspective on human evolution. What can fossil apes tell us about the origins of human evolution? Did the last common ancestor of apes and humans live in trees or on the ground? What did it eat and how did it survive in a world full of large predators? Did it look anything like living apes? Andrews addresses these questions and more to reconstruct the common ancestor and its habitat. Synthesising thirty-five years of work on both ancient environments and fossil and modern ape anatomy, this book provides unique new insights into the evolutionary processes that led to the origins of the human lineage. *Human Evolution* George D. Brown, 1995 This work is intended for use with supporting material in an introductory level multidisciplinary college course. Its audience are students who are not majoring in one of the sciences directly pertaining to human origins, e.g. biology, geology, and anthropology. This text provides a better understanding of the fundamental aspects of human evolution by placing them in an integrated context with all of nature. **From Apes to Cyborgs** Claudio Tuniz, Patrizia Tiberi Vipraio, 2020-03-01 This book offers fascinating insights into the lives of our ancestors and investigates the dynamic processes that led to the establishment of complex human societies. It provides a holistic view of human history and social evolution by drawing on the latest evidence from a wide range of disciplines and proposes new hypotheses on the origins of human behaviour. After exploration of the encounters of *Homo sapiens* with other human species, diverse aspects of life in emerging societies are examined, including clothing, work, leisure, learning, diet, disease, and the role of women. Attention is drawn to the key role of self-domestication, the process of reducing natural aggression and increasing playfulness in enabling survival. Another focus is *Homo oeconomicus*. The significance of symbolic thought for the emergence of surpluses in goods and services is highlighted with analysis of how this led to private accumulation of wealth and development of the first hierarchical societies. Finally, the discussion turns to humans of the future and the potential risks posed by artificial intelligence. The aim is to unveil the deep roots of our social behaviour and how it is going to intertwine with the development of digital technologies and social networks. **Great Books of the Western World: The great ideas**, 1952 *The Literary World*, 1899 *50 Great Myths of Human Evolution* John H. Relethford, 2016-12-19 *50 Great Myths of Human Evolution* uses common misconceptions to explore basic theory and research in human evolution and strengthen critical thinking skills for lay readers and students. Examines intriguing yet widely misunderstood topics from general ideas about evolution and human origins to the evolution of modern humans and recent trends in the field. Describes what fossils, archaeology, and genetics can tell us about human origins. Demonstrates the ways in which science adapts and changes over time to incorporate new evidence and better explanations.
