**Object Perception** Bryan E. Shepp, Soledad Ballesteros, 2013-04-15 This collection of research on object perception focuses on holistic and featural properties of objects the mechanisms that produce such properties how people choose one type of property over another and how such choices are improved during the course of child development The contributions consider alternative perceptual characterizations the way in which such properties are represented in the mind how particular properties are more useful in some kinds of tasks that humans perform and how the developing child learns to cope with different properties in choosing among alternatives to optimize task performance These papers were written by specialists for specialists in experimental cognitive and developmental psychology

**Multisensory Object Perception in the Primate Brain** Marcus Johannes Naumer, Jochen Kaiser, 2010-07-03 It should come as no surprise to those interested in sensory processes that its research history is among the longest and richest of the many systematic efforts to understand how our bodies function The continuing obsession with sensory systems is as much a reflection of the fundamental need to understand how we experience the physical world as it is to understand how we become who we are based on those very experiences The senses function as both portal and teacher and their individual and collective properties have fascinated scientists and philosophers for millennia In this context the attention directed toward specifying their properties on a sense by sense basis that dominated sensory research in the 20th century seems a prelude to our current preoccupation with how they function in concert Nevertheless it was the concentrated effort on the operational principles of individual senses that provided the depth of understanding necessary to inform current efforts to reveal how they act cooperatively We know that the information provided by any individual sensory modality is not always veridical but is subject to a myriad of modality specific distortions Thus the brain's ability to compare across the senses and to integrate the information they provide is not only a way to examine the accuracy of any individual sensory channel but also a way to enhance the collective information they make available to the brain

**Blindness and Brain Plasticity in Navigation and Object Perception** John J. Rieser, Daniel H. Ashmead, Ford Ebner, Anne L. **Perception** John M. Wilding, 2017-03-16 Originally published in 1982 this book introduces the student to the central problem of all perceptual theories just how does the perceiver identify particular objects In focusing on the problem Dr Wilding provides a coherent well organized framework for its study bypassing the conventional split between perception and reaction time evidence which was common to most textbooks at the time The author draws on evidence from a wider number of research traditions and argues that each has a contribution to make to any account of perception Throughout he emphasizes the methodological basis of the research discussed in order to provide students with a solid foundation for their own practical work
