Provenzo,Asterie Baker Provenzo,2012-07-31 Here is a highly motivating book for grade school students that will introduce them to many of the world's most popular and historically significant scientific experiments. They'll learn about gravity simply by following the acrobatic antics of an ordinary coin. By trying to blow an egg out of a cup they'll discover the principles of air pressure. Dancing soap bubbles will help them understand the effects of static electricity and by dropping quarters into a full glass of water without causing it to overflow they'll study the effects of surface tension. These and over 40 other experiments have been carefully selected by noted educators Eugene and Asterie Baker Provenzo to familiarize children with classic science experiments involving optics, inertia, air pressure, magnetism, sound, topology, light, density, vibration, prisms, elasticity, gases, vacuum, perspective, geometry, centrifugal force, buoyancy, color and much more. Some experiments such as the optical Newton's Rings are hundreds of years old. Still others like the straw lever test are based on Greek experiments with leverage and the center of gravity first carried out thousands of years ago. Easy to follow instructions and illustrations show youngsters how to perform each experiment, most of which are prefaced with historical background, a list of necessary materials and an explanation of key terms. Almost all experiments can be carried out with common household items: tissue paper, scissors, tapes, rubber balloons, pens, pencils, etc. and can be worked at home or in the classroom to demonstrate specific scientific principles or to supplement a science curriculum unit. Sources for all historical illustrations given in the text are listed at the end of the book. *Amazing Science Experiments with Everyday Materials* Elmer Richard Churchill, 1992 Over 60 simple experiments illustrate seven groups of physical principles. Illustrated by charming drawings, each activity lists equipment needed, procedures, what happens, why and what now. Interesting enough to intrigue any age, particularly 7-12.

Science Books Films *Science School* Tia Williams, Laura Minter, 2021-04-07 Science School teaches children about the basic principles of science through 30 exciting experiments and crafts that can be done at home using everyday objects and materials around you. Why do bubbles hold their shape? How does an electric circuit work? What makes popcorn pop? Can an egg bounce? If you thought that science could only be practised wearing white coats in a sterile laboratory, think again. A brilliant way to link the STEM/STEAM themes being taught at school back to your home in a fun and fascinating way. Perfect for budding scientists who love to ask why. Activities include making slime, baking soda fizz, coloured celery, invisible ink, soda bottle ecosystem and many more. Designed to make science exciting and relatable to all children. The book is aimed at children aged 7-11 years old. Each project has easy to follow, illustrated scientific information explaining how the experiment works. Teaches children about crafting skills and features simple projects aimed at parents with little or no crafting experience. Most projects can be made with items already in the house. **The Really Useful Book of Science Experiments** Tracy-ann Aston, 2015-09-16 The Really Useful Book of Science Experiments contains 100 simple to do science experiments that can be confidently carried out by any teacher in a primary school classroom with minimal or no specialist equipment needed.
