If a baby does not begin breathing in response to stimulation, you should assume they are in _____ apnea. **Correct Answer** Secondary

(At the initiation of respiratory compromise, newborns experience an initial period of attempted rapid breathing followed by primary apnea. Primary apnea results in a reduced oxygen saturation, resulting in a lower heart rate. Stimulation will usually assist a newborn in the required respiratory transition, however if a newborn does not start breathing immediately following stimulation, he/she is likely experiencing secondary apnea. Further stimulation will not help, and the newborn require positive-pressure ventilation.)

Which device should be readily available as a backup wherever resuscitation may be needed, in case a compressed gas source fails? **Correct Answer** Self-inflating bag
